Leocap Invest Platform: What Has Changed

For: Elvis Karemi
Covers: 15 October 2026 to today
Last updated: 28 October 2026

This document lists, in plain language, every improvement and correction made to the loan platform since work began on 15 October 2026. For each change it shows what things were **like before** and what they are **like now**.

How to read this document

- Changes are grouped by topic (money, reports, emails, and so on). Pick the topic you care about; you do not need to read it in order.
- Every table has the same columns: **What** (the change), **Before**, **After**, and **Date**.
- Dates are 2026. A date is the day the change was made.
- Everything below has been **published to the live platform**.
- Section 15 lists **decisions that are waiting for you**. Section 16 lists things that are **still as they were** (known limits), so nothing is hidden.
- Section 18 describes the **demo version** for showing the platform to prospective clients, and what keeps it safe.

Words used in this document

Word	What it means
Balance owed	What a borrower still has to pay on a loan right now (the system calls it the "outstanding balance").
Statement	The list of everything charged to and paid on a borrower's loans: the loan, its interest, payments, fees. Each line shows the balance after it.
Delinquent	A loan that is overdue by more than 7 days. The platform adds a 10% late-payment charge, once, when the loan was applied for from 26 Oct 2026 (older loans are simply marked delinquent). The 15% collection fee is **not** added now: it is charged when you press **Escalate** (the demand notice) on a defaulted loan.
Defaulted / Escalated	The next steps after delinquent: the loan is marked defaulted, then a demand notice is produced (escalated).
Rollover interest	Extra interest charged on a loan that was not repaid on time, so the borrower gets more time.
Penalty	A one-off charge you add to a loan (for example for a late or dishonoured payment). New on 25 October.
Audit trail	The platform's own record of who did what and when. Entries cannot be edited, and recent ones cannot be deleted.
Written off	A loan you have decided to stop chasing. Its balance is cleared and its statement is closed.

How a loan's balance moves (as the platform works today)

Event	Effect on the balance owed
Loan is applied for	Starts at the loan amount **plus its interest**
Payment recorded	Goes **down** by the payment
Rollover interest charged	Goes **up** by the chosen % of what is **still owed** (not of the original total)
10% late-payment charge (after 8 days overdue)	Goes **up** by 10% of what is still owed, once, on its own line on the statement. It applies only to loans applied for from 26 Oct 2026.
15% collection fee (when you press **Escalate**, the demand notice)	Goes **up** by 15% of what is still owed **at that moment**, once, on its own line on the statement. Pressing Escalate again, or downloading the notice again, never charges it again. A loan that already has the fee (charged on the 8th day before 29 Oct) is not charged a second time.
Penalty added	Goes **up** by the penalty amount
Marked as paid	Goes to **zero**
A wrong payment, interest, fee or penalty is deleted from the statement	Goes back to what it would have been, and the lines after it are corrected

The short version

1. **The platform is online, up to date, and easy to update.** Each approved change is published automatically, and can be undone.
2. **Loan money is calculated consistently.** Balances, interest, payments and statements now agree with each other, and interest follows your rule: it is charged on what is still owed.
3. **Existing records were corrected** (Section 3), with copies kept of everything that was changed.
4. **"Mark as Paid" works.** It crashed before. Clearing a whole company's month is now previewed, recorded and emailed.
5. **Late loans are handled.** A daily check sends reminders and applies the 10% late-payment charge; delinquent loans can be paid and defaulted, and escalating a defaulted loan (the demand notice) charges the 15% collection fee.
6. **Reports and downloads work.** The PDF download did nothing before.
7. **Emails are sent and tracked.** New applications, finance notices, "fully repaid", password resets and penalties. Every email is recorded.
8. **Serious security gaps were closed.** For example, any signed-in applicant could approve or delete anyone's loan.
9. **The admin screens are safer and easier.** The old "Suspend" button deleted people and their loans. It now only suspends.
10. **New tools for you:** a clickable **Overdue** card, a **searchable applicant statement** with a per-line delete, and **Add Penalty**.
11. **The public website was redesigned** (same wording), with a new FAQ page.
12. **You can now edit the words of the public website yourself** (Section 13.1): contact details, an announcement banner, the home page headings, hero numbers, product cards and "How it works" steps, testimonials, the FAQs, the Privacy Policy and the Terms and Conditions, with a private draft, a preview, one-click publishing and a history.

13. **The public website is now ready for search engines and loads faster** (Section 13.2): each page has its own title and description, link previews show a picture, there is a sitemap and a tab icon, and the first download is about a quarter of the size.
14. **A friendly assistant, Leo, now helps visitors and applicants** (Section 13.3): he answers the questions that stop people applying, can estimate what a loan would pay out, and walks them to the next step. He works on phones first.
15. **A slim strip above the menu bar of the home and FAQs pages** (Section 13): your phone number, **opening hours**, email and address, and **Track application** for people who have already applied, shown while the page is at the very top.
16. **The applicant's own pages now guide the borrower** (Section 14): a "next step" card on the home page, a status tracker with what happens next on every application, a phone-friendly application form that keeps what was typed, and a warning before the form when it would be refused. We also found that a decline blocked any later application (decision 24); that is fixed.
17. **The applicant's pages are finished and match the website** (Section 14): filters and due dates on the loan list, a clearer profile, the borrower's loan limit shown, "Apply again", a borrower's own calculator, a fix for a complete profile showing as incomplete, and a new look in the website's navy and red.
18. **The loan agreement can be edited under Site content, and every acceptance is now recorded** (Section 13.4): what the borrower was shown, when, from where, sealed so that any later change is detectable, and printed in the debt dossier.

15. Decisions waiting for you
16. Still as before (known limits)
17. Change log by date

---

1. Putting the platform online and keeping it updated

What	Before	After	Date
The version on the website	The live platform was running an older copy of the program (from 10 September) that lacked many features.	The live platform runs the current version.	15 Oct
How updates are published	No repeatable way. Files had to be copied across by hand.	Every approved change is published automatically, usually within a few minutes. If a change causes a problem, it can be taken back by returning to the earlier version.	15 Oct
Two web addresses	`app.leocapinvest.co.ke` could not talk to the platform's server, so signing in there could fail.	Both `leocapinvest.co.ke` and `app.leocapinvest.co.ke` show the same up-to-date site and both work.	15 Oct
The database	The live database was missing 5 tables and several columns the newer program needs. Money amounts were stored as text rather than numbers.	Upgraded in one careful step. A backup was taken first, and afterwards the totals were confirmed unchanged (112 applications, 70 applicants at that time).	15 Oct
Part of the program was not saved in the project	A section of the website's code had never been saved with the rest, so the site could not be rebuilt on another computer or by the publishing system.	Saved. The site can be rebuilt reliably.	15 Oct
Setup instructions	Out-of-date notes describing a different technology.	Replaced with accurate setup notes.	15 Oct

2. Money: balances, interest and statements

What	Before	After	Date
Changing a loan's amount or rate	Changing the terms did not carry through to the repayment amount or the balance owed. The statement kept the old figures.	Repayment, balance and the statement lines all follow the new terms.	15 Oct
Rollover interest	Interest was calculated on the original total, ignoring payments already made.	Interest is charged on **what is still owed**, as you instructed.	15 Oct
Admin's statement view	It ignored the dates you picked. The running balance added up all of a borrower's loans together, which meant nothing. HR and finance could not open it.	It respects the dates. Each line shows **that loan's own balance**. HR and finance can open it.	15 Oct
Statement PDF	Some older entries were not matched to the right loan, so a loan's statement could be empty or incomplete.	Each loan picks up its own entries correctly.	15 Oct
Starting interest rate on a new application	The rate came from a hidden value sent by the applicant's browser, so it could be altered (even to 0%).	The platform sets the rate from the company's own rate. Any attempt to send a different rate is noted in the record.	21 Oct
Loan amount checks	A missing, zero or absurdly large amount could cause an error or be accepted.	Refused with a clear message.	21 Oct

What	Before	After	Date
Payment status on the borrower's own pages	The borrower's loan list never showed a payment badge. "Amount Paid" stayed empty for part-paid loans, and a delinquent loan showed no payment status.	The list shows "Partially Paid" or "Fully Paid". The loan page shows what has been paid and what remains (the balance owed). A delinquent loan shows as "Overdue".	21 Oct
Fixing a wrong statement line	A mistaken payment, interest or fee on a statement could not be removed.	It can be deleted safely (see Section 5), and the loan's balance is corrected.	25 Oct

3. Corrections made to your existing records

These changes were made **directly to the live data**, not just to the program. In every case a copy of the original was kept first, so any of it can be reversed.

What was corrected	Before	After	Date
Duplicate "Loan rate set" lines	13 old lines (dated 31 July to 5 October, across 9 borrowers) repeated a loan's amount a second time. This inflated "Total borrowed" on statement PDFs by about **KES 2.3 million**.	Removed. A copy of the 13 lines is kept.	15 Oct
Interest and "Loan paid" lines	The opening lines of 5 loans (9 lines) did not match their loans. Three "Loan paid" lines showed a balance instead of zero.	Corrected to match the loans.	15 Oct
Statements of 12 loans (6 borrowers)	The statements did not match your records.	Rebuilt from your spreadsheet (`leocap loans.xlsx`). 52 lines in all. For every loan, charges less payments now equals its balance. Notes made at the time: one principal in the sheet (94,669) looked like a typing slip, and 94,699 was used; one payment differs by KES 0.48 from rounding.	15 Oct
One loan's balance	The balance and an interest line had been worked out on the old basis (on the original total).	Corrected to your rule. Balance KES 172,500.	15 Oct
"Company" shown on 8 personal loans	The employer's name typed on the form (for example "De La Rue" or "Inspire Credit Ltd") had replaced the company, creating look-alike companies in your totals.	Set to the company chosen at sign-up. Company totals then read Nakama 72, Ideon 21, Personal 20.	17 Oct
Personal company's HR contact	The contact address (`loans@leocapinvest.co.ke`) is a mailbox that does not exist, so notices bounced.	Changed to `hr@leocapinvest.co.ke` .	22 Oct

4. Repayments, late loans and reminders

What	Before	After	Date
"Mark as Paid"	It crashed with an error every time, on the dashboard and on the loan page.	Works. It records "Loan paid" on the statement, sets the balance to zero, writes an audit record and emails the borrower.	21 Oct
"Mark Nakama Paid" / "Mark Ideon Paid"	One click marked **every** disbursed salary advance of that company as paid, whatever the month or status, with no statement entry and no record.	You choose **one repayment month**. The platform first shows **how many loans and the total**, and asks you to confirm. Only that month's unpaid loans are cleared, each with a statement entry, an audit record and an email to the borrower.	22 Oct
Delinquent loans	They could not take payments, could not be defaulted or escalated, and were missing from the dashboard and reports. The borrower saw no status.	You can record payments (the loan **stays** delinquent, so the fee and the charge are never added twice). Loans can be defaulted and escalated. They count in the dashboard and reports. The borrower sees "Overdue" and the amount remaining.	21 Oct
The daily reminder check	Anyone on the internet could trigger it (it adds fees and emails borrowers). Its emails never actually sent because of a bug. It was not scheduled.	It is protected by a secret key and runs **every day at 6:00 am**. It emails reminders **7 days before the due date, 3 days before, on the due date, and 7 days after**. From the **8th day overdue** it marks the loan delinquent and adds the 15% collection fee and the 10% late-payment charge on what is owed.	21 Oct
10% late-payment charge	A loan that went delinquent (8 or more days overdue) was charged only the 15% collection fee.	The same daily check now also adds a **10% late-payment charge**. It is worked out on the **same balance** as the 15% (so a loan with KES 10,000 still owed goes up by 1,500 and 1,000, to 12,500), is written as its **own line** on the statement ("Late Payment Charge", next to "Delinquency Collection Fee"), and is included in the delinquency email, which now states both amounts and the new balance. The 7-days-overdue warning email mentions it too, and the borrower's loan page says a charge has been added. Each loan is charged **once**. Because they are separate lines, one can be corrected or deleted without the other (see 5.3). **Only loans applied for from 26 Oct 2026 are charged the 10%**, because those are the borrowers who accepted the updated terms (see below); older loans, and loans that were already delinquent, get the 15% alone as before. The loan's repayment amount is unchanged.	25 Oct
The 15% collection fee follows the demand notice	The daily check added the 15% collection fee automatically on the 8th day overdue, before any demand notice, while the loan terms say it follows one.	The 15% is **charged when you press Escalate** on a defaulted loan (the one that produces the demand notice), once, on what is owed at that moment, as the line "Delinquency Collection Fee". **Escalate now asks first**: it shows the fee and the balance before and after (for example 19,800 to 22,770) and only then charges it and downloads the notice. Pressing it again just downloads the notice (the button then reads **Download demand notice**). The 8th-day check now marks the loan delinquent and adds only the 10% late-payment charge (loans from 26 Oct 2026), and its email no longer says a collection fee was applied: it says a fee is added if a demand notice has to be issued. The fee is written to the loan's history and the audit trail. The demand notice PDF lists it as before.	29 Oct

What	Before	After	Date
Loan terms now state the 10% late-payment charge	The terms a borrower accepts when applying (Salary Advance, HR, Finance and Personal Loan forms) did not mention it.	Under "Default", each now has a new line: "A late-payment charge of 10% of the outstanding balance may be charged after 7 days of default." The loan agreement printed in the debt dossier shows that line **only for loans applied for from 26 Oct 2026**, so an older loan's paperwork still shows exactly what that borrower accepted.	25 Oct
Dashboard "Outstanding" and "Overdue"	They left out part-paid loans and delinquent loans, so they under-stated what is owed.	They include unpaid, part-paid and delinquent disbursed loans.	21 Oct

5. New tools: Overdue shortcut, Applicant Statement, Penalties

5.1 The Overdue card is now a shortcut (25 Oct)

Before	After
The **Overdue** number on the admin dashboard was just a number.	Click it to see **exactly those loans**: disbursed, past their due date and not fully repaid. If you chose a month at the top of the dashboard, the list is for that month, so the number and the list always agree. A "Show all applications" button clears the filter.

5.2 The Applicant Statement (Manage Applicants, open an applicant) (25 Oct)

What	Before	After
Opening it	You had to click "View Statement Entries" before seeing anything.	It opens straight away with the full statement.
Finding things	Three date boxes (one of them only labelled the PDF). Lines from all of a borrower's loans were mixed together with no indication of which loan.	One **Loan** picker (when there are several loans), date shortcuts (**This month**, **Last 30 days**, **Last 90 days**, **Custom**), **type buttons with counts** (Payments, Interest, Charges, Loan, Write-offs), and a **search** box that finds a description or an amount. Each line names its loan.
Totals	None.	Shows **Charged** and **Paid** for what you are looking at, and the **Balance owed now**.
The PDF	The button stayed greyed out until two dates were entered, with no explanation.	It follows what you selected: the loan and the dates. For "All time" no dates are needed.
Checking details	Not possible.	Sort newest or oldest first. "Clear filters" resets everything.

5.3 Correcting or deleting a wrong line on the statement (25 Oct)

Before	After
A payment, interest charge or fee entered by mistake could not be removed.	Every line has a **delete** button. Before anything changes, the platform shows **exactly what will happen** (for example: "Balance owed: KES 6,800 to KES 9,800", "Loan status: Paid to Unpaid", "2 later lines will be re-balanced"). You can add a reason. The loan's balance, its status and the running balance on every later line are corrected, and the change is written to the loan's history and the audit trail.

Before	After
A wrong amount, date or wording could only be fixed by deleting the line and entering it again.	Every line also has an **edit** (pencil) button. You can change the **amount**, the **date and time** and the **description**. While you type, the platform shows what will happen before you save: the new balance owed, whether the loan's status changes, and how many other lines are re-balanced. For rollover interest the loan's repayment total follows too. A payment's wording follows its amount ("Partially paid 3000" becomes "Partially paid 2500") unless you write something else. You can add a reason, and the change is written to the loan's history and the audit trail.
	Safeguards: a payment cannot be raised above what the borrower owes; a line keeps its kind (a payment stays a payment); the date cannot be in the future or before the loan was applied for; and moving a date puts the line in its new place and corrects the balances of the lines it moved past.
	Protected: the two opening lines of a loan (the loan itself and its first interest) cannot be edited or deleted; change the loan's terms instead. A **written-off** loan's statement is closed.
	A loan already marked paid (29 Oct): if you lower an interest charge after a loan was marked paid, its statement then holds more payments than charges. The platform now remembers that, so lowering the payment to match leaves the loan **paid**. Before, it reopened the loan with a balance equal to the difference, even though the statement added up to zero. The preview before you save says what will happen, as before.

5.4 Add Penalty (loan page) (25 Oct)

Before	After
There was no way to charge a one-off penalty on a loan.	A new **Add Penalty** button on an open loan opens a small form with three fields: **Amount**, **Date & Time** and **Penalty Description**.
	While you type, it shows the effect: "Balance owed: KES 6,800 to KES 7,300".
	The penalty appears on the statement as "Penalty: your description", with the date and time you entered. It can be **backdated** (later lines are re-balanced) but not dated in the future.
	It raises the balance owed only. It does **not** change the loan's repayment amount or due date, and it does not mark the loan as defaulted.
	Only open, disbursed loans accept a penalty. A penalty entered twice in the same minute is refused.
	The change is recorded in the loan's history and the audit trail. A wrong penalty can be deleted from the statement (5.3).
Email to the borrower	A tick box, **on by default**: "Email the borrower at their address". The borrower is told the amount, the reason, the date, the loan reference and what is now owed, with your contact details. Untick it when you are entering old penalties from records, so borrowers are not emailed about old charges. If a borrower has no email address, the box is greyed out and says so.

6. Reports and downloads

What	Before	After	Date
Admin "Download PDF" on Reports	It did nothing. The server failed silently.	Works. The same problem was also fixed for other downloads built "on the fly".	17 Oct

What	Before	After	Date
Demand letter (inside the debt dossier)	It showed 0.00 for the rescheduling fee and the debt collection fee even on loans the platform had charged, and it demanded the loan's full repayment amount, so the fees were missing from the total and payments already made were ignored. Its small table did not add up either.	It now demands **what is really owed today**: the repayment amount, plus the collection fee, the late-payment charge and any penalties, less payments received. The fees are taken from the borrower's statement, and each is listed **only if it was actually charged** (no more "fee of 0.00"). The table lists each amount, shows payments as a minus line, and always adds up to the total demanded. Old loans that already carried a fee amount keep it.	25 Oct
Report date filters	The date filters did not change the table, the totals or the downloads.	They apply everywhere on the page.	17 Oct
Overdue-by-days figures and the Disbursed column	The "days overdue" cards always showed 0, and the Disbursed column was wrong.	Correct. The page was redesigned with a clearer layout (money in and out, overdue by age, easier filters). If the loan list fails to load it now **says so** instead of showing "0 loans".	17 Oct
Filters on admin, HR and finance pages	Several did not work.	They work.	17 Oct
Sorting	Not possible in the Reports loans table.	Click a column to sort across the whole list (a sort menu on phones).	22 Oct
Repayment PDF for HR (Nakama and Ideon)	HR received an older, plainer layout than the admin's. The admin's own report spilled onto extra pages from about 10 loans.	Both use the admin layout, and the report **always fits on one page**.	21 Oct
HR repayment Excel	"All months" failed for Nakama and Ideon.	Works. The month defaults to the current month. The title shows the month.	21 Oct
Repayment reports for other companies	HR and finance staff of companies other than Nakama and Ideon were not set up for them.	Any company's staff can download their own company's report.	21 Oct
A failed download	A vague "Failed to download".	Shows the real reason (for example "no loans due this month").	21 Oct
Dates on the account statement PDF	On some statements the DATE column of the transaction table printed "nan" instead of a date. It happened when an applicant's first ledger lines were typed in from your spreadsheet (stored without fractions of a second) and later lines were recorded by the platform (stored with them): the later lines lost their date, could be put in the wrong order, and a line not tied to a loan could be left out entirely. Two applicants were affected on 26 Oct, four lines in all.	Every date prints correctly, in order, and no line is dropped. A date that is truly missing would print "N/A", never "nan". Nothing in the stored data was wrong, so nothing needed correcting: download the statement again.	26 Oct

7. Emails the platform sends

What	Before	After	Date
Forgot password	The page said "we've sent you a new password", but nothing was sent and there was no way to set a new one.	A real **reset link** is emailed. It works once, lasts 1 hour, and opens a page to choose a new password. It gives the same answer whether or not the email exists.	21 Oct
HR is told about a new application	The 15 October update did not include this, so HR received no email.	The company's HR staff and its HR address are emailed with a link. The applicant is never emailed about their own application. **Personal** applications go to `hr@leocapinvest.co.ke`.	21-22 Oct
Finance is told when HR staff apply	Nobody was told.	Finance staff of that company are emailed. If the company has none, the Leocap team is emailed with a link to the admin page.	22 Oct
The sending mailbox	The old sender could not log in to the mail server, so no email could leave.	A new mailbox, `notifications@leocapinvest.co.ke`, is set up and works.	21 Oct
Emails leaving reliably	Emails could sit unsent for minutes, until another visitor used the platform.	They are sent as part of the same request, so they leave straight away.	22 Oct
"Your loan is fully repaid"	Only one of the five "mark as paid" routes sent it, in a rough format, before saving.	**Every** way of marking a loan paid emails the borrower once, after it has been saved.	22 Oct
Document rejected and reminder emails	These never actually sent (a bug).	They send.	21 Oct
A record of every email	Nothing recorded whether an email had gone.	Each email has an audit line: who it went to (partly hidden), why, whether it worked, and the mail server's receipt number. Search "Emailed" in Audit Trails.	22 Oct
Penalty notice to the borrower	Not applicable.	See 5.4.	25 Oct

8. Security and privacy

These weaknesses were found by reviewing the program, not because of a reported incident. All are closed.

What	Before	After	Date
Changing any loan's figures	Any signed-in person could change any field of any loan.	Staff only.	15 Oct
Approving, rejecting, disbursing, deleting loans	Any signed-in applicant could do this to **anyone's** loan, and could read anyone's application.	Approve and reject: staff. Disburse and delete: admins only. An applicant sees only their own loans.	19 Oct

What	Before	After	Date
Out-of-date building blocks	Zod, Vite and follow-redirects (and about sixty packages they use) had published security fixes that were not installed.	Updated. The packages that reach visitors show 0 known problems; three moderate findings remain in a build tool (Tailwind), which would need a major upgrade and cannot affect visitors.	26 Oct
Creating or removing admin accounts	Anyone could create an admin account. Any signed-in person could delete or change an admin.	Only admins can create or change admin accounts.	19 Oct
Borrowers' documents (ID, KRA, payslips)	Any signed-in person could download or delete anyone's documents.	Only the owner, an admin, or HR or finance of the same company.	19 Oct
The daily reminder check	Open to anyone on the internet.	Needs a secret key (Section 4).	19-21 Oct
Test pages	A test page could create an admin sign-in without a password.	Locked. (The live server did not have them.)	19 Oct
Sign-up	The sign-up form could be edited to register as HR, finance or admin.	Everyone signing up becomes an applicant. Only a signed-in admin can create HR or finance staff.	19 Oct
Public company list	Anyone could see each company's bank account and fee rates.	Only the names are public.	19 Oct
Uploaded file names	A crafted name could save a file outside its folder.	Files are saved safely by number, not by name.	21 Oct
Editing your own profile	A profile save could also change your type, loan limit, interest rate or status.	A profile save changes only profile details.	21 Oct
Sign-in cookie and links	Actions that change data could be triggered by simply opening a link.	They need a proper request, and the sign-in cookie is stricter.	21 Oct
Password reset	A non-working stub (Section 7).	Secure single-use link.	21 Oct
Old leftover code	Leftover pages from an earlier system, including a fake sign-in, and detailed logging in the browser that could include a sign-in token.	Removed.	21 Oct
Super admin address	The pages checked for `admin@leocapinvest.com`. The real super admin is `admin@leocapinvest.co.ke`.	Corrected, so the rule that only the super admin can remove admins now works.	22 Oct

9. HR, finance and companies

What	Before	After	Date
Company choice at sign-up	The form silently pre-selected the first company, so people could be registered under the wrong one. "Personal" appeared twice, and deactivated companies were offered.	Starts empty, you must choose, only active companies are listed.	19 Oct

What	Before	After	Date
A loan's company	The employer typed on the form replaced the company.	The company is always the one chosen at sign-up. The typed employer is kept separately. Dashboards group correctly.	17 Oct
HR and finance for any company	Only Nakama and Ideon staff had a proper portal. Staff of any other company were sent to the wrong one.	Every company's HR and finance staff get their own portal, with their company's name and only their company's data.	21 Oct
HR and finance lists	"My Applications" and "HR Loans" were always empty, names showed as "Unknown", and one page crashed.	They show real loans and names.	21 Oct
"Amend Amount" buttons	They did nothing (the feature did not exist).	They work. Rules: not your own loan, not a same-role colleague's, only while the loan is awaiting review, within the borrower's loan limit. Fees follow the loan rules, the status becomes "Amended", and everything is recorded.	21 Oct
Who may approve or reject a loan	HR and finance could approve or reject any loan of their company, **including their own** or a colleague's of the same role. Only "Amend Amount" had a rule.	The same rule now covers approve and reject (and the general amend tool): nobody decides their own application, **HR handles applicants' and finance staff's loans, finance handles applicants' and HR staff's**. The buttons are hidden on a loan the person may not decide, with the reason shown, and the server refuses the request too. Admins can still decide any loan, so nothing gets stuck.	25 Oct
Rejection reasons typed by HR and finance	The reason typed on the HR and finance screens was **not saved**; the history only said "Rejected".	It is saved in the loan's history, as it already was for admins.	25 Oct
Finance's "HR Loans" page	Offered only "Amend Amount" yet said "Awaiting your decision: approve, reject or amend".	Its **Review** button opens the full review page, where finance can approve, reject or amend an HR staff member's loan. The link in the "new loan application" email that finance receives when an HR user applies goes to the same page (the old address still works, so emails already sent keep working).	25 Oct
Fake sign-in pages	`/login/hr` and `/login/finance` never signed anyone in. The admin page showed admin screens (no data) for the old super-admin address with any password.	Removed. There is one proper sign-in for applicants and staff, and one for admins.	21 Oct
HR and finance profile	Saving worked, but then an error message appeared. Staff of other companies could never reach 100% complete.	Saves cleanly. The same rules apply to every company.	21 Oct

10. Applicants and their accounts

What	Before	After	Date
9-digit ID numbers	Refused ("must be 7-8 digits").	Accepted: 7 to 9 digits.	19 Oct

What	Before	After	Date
Loan limit	No screen to set one.	On an applicant's page an admin can set a **Loan Limit (KES)**. Leave it empty for no limit. An application above the limit is refused with a message naming the limit.	21 Oct
Pop-up messages	**None ever appeared anywhere in the platform**: errors and confirmations were silent.	They appear (top right).	21 Oct
Uploaded documents and profile save	Documents were filed by the person's name.	Filed by number. A profile save changes only profile fields.	21 Oct
Expired sign-in	A page showed "failed to load" and left you stuck.	You are taken to the sign-in page with a short message.	17 Oct
Sign-in, forgot password and sign-up pages	Plain pages, an empty logo slot, errors only after submitting.	A modern look. A small link to the other sign-in (see Section 14). Messages appear as you type. A show/hide password button. A caps-lock warning. A password-strength meter. Clear messages. A duplicate email says so plainly.	22 Oct
Admin sign-in error	"User not found, please register".	"Invalid email or password. This portal is for admin accounts only."	22 Oct
Sign-in when the server is busy or down	The sign-in pages told someone with the right details "Invalid email or password" when the server could not be reached or answered with an error page (for example the host's "temporarily busy" page), and the admin page showed the raw words "Network Error".	Both say "The server is not responding right now. Please try again in a moment." A genuinely wrong password or unknown email still gets the old message. A sign-in that gets no answer at all now gives up after 30 seconds and says the same, instead of waiting on "Signing in…" until the browser gives up.	27 Oct
Borrower dashboard: "Next due date"	Showed the earliest due date of **all** the borrower's loans, paid ones included (for example a date in May for a loan that falls due in November).	Shows the earliest due date among the loans still owed.	25 Oct
Loan type on a borrower's loan page	Called every company's salary advance "Ideon Salary Advance".	Says "Salary Advance", and names the company only for Ideon and Nakama (as the borrower's list already did).	25 Oct

11. Admin screens: easier, safer, fully recorded

What	Before	After	Date
The "Suspend" button on Manage Applicants	It **permanently deleted** the person and all their loans.	It really suspends. There is also an Active/Suspended switch and a **Reactivate** option. If a person still has unpaid loans, it explains why it cannot proceed.	22 Oct
Deleting people	Deleting a person wiped their loans and records. HR could remove staff of any company.	Admins only. A person who has loans **cannot** be deleted (suspend them instead).	22 Oct

What	Before	After	Date
Removing staff and admins	An admin could remove the super admin or themselves. Only the browser stopped this.	Only the super admin can remove admins. Nobody can remove themselves or the super admin. The server enforces it.	22 Oct
Deleting statements and saved emails	Any signed-in person could.	Admins only, with a confirmation.	22 Oct
Delete Application (Danger Zone on a loan's page)	The button did nothing useful: the server refused every delete with an error ("Request failed with status code 500"), because the loan's statement lines still pointed at it. Nothing was lost.	It works for a loan that was **never paid out** (pending, amended, rate set or accepted, approved, declined): the loan, its documents, emails, history and statement lines are removed, the borrower's profile documents stay, and a copy of the loan, its history and its statement lines is kept in the system log. A loan that was paid out (disbursed, defaulted, written off, or with any payment) **cannot be deleted**: the Danger Zone says why, and a wrong line is corrected on the borrower's statement instead.	25 Oct
The Audit Trail	Sign-ins, approvals, deletions and downloads were not recorded. Application changes showed a long code instead of who changed things. Search worked only on the visible page. Logs could be deleted even for yesterday.	Everything meaningful is recorded in plain words (sign-ins, including failed ones, approvals, edits with the old and new value, downloads, emails). Search works across the whole history, and you can filter by "what changed". Logs from the last 30 days cannot be deleted. Deleting a loan keeps a record.	22 Oct
Admin screen layouts	Text was cut off. Tables were unusable on phones. Names appeared in mixed capitals.	Every admin screen fits every screen size. Long lists become cards on small screens. Names look consistent.	22 Oct
Dashboard	Some figures were cut off.	A slim, compact dashboard with whole-shilling figures that fit.	22 Oct
Manage Applicants	The page buttons did not really page.	Paging works. You can sort.	22 Oct
Date of disbursement on the applicant's page	The Loan Applications list on an applicant's page showed the amount and status of each loan, but not when it was paid out.	Each loan that has been disbursed now shows **Disbursed: 10 Oct 2026**, in the viewer's own local time. The date comes from the loan's change history (the moment the loan was moved to Disbursed; saving it again later does not change it). Loans that were disbursed before the platform kept this history show "date not recorded" rather than a guess, with an **Add date** button next to it (see the next line).	25 Oct
Sorting the tables	Most lists were fixed newest-first with no way to reorder them. Manage Applicants had a click-to-sort that could not be used from the keyboard, started "Joined" oldest-first and did nothing on phones.	Click a column heading to sort (click again to reverse); on a phone use the **Sort** menu above the list. It sorts the **whole list across all pages**, never just the page on screen, and anything blank (a loan with no due date) always goes last. Done for: **All Applications** (Applicant, Amount, Status, Repayment, Applied, Due), **Manage Applicants** (name, email, ID number, type, joined), the **HR and finance applications** lists, the **Loan pipeline** on the dashboard, the **transactions** on Financial Analysis (date, money in, money out, to find the biggest ones), and the **audit logs** (oldest first as well as newest first). Left alone on purpose because they are tiny or the order is the point: a borrower's own loans, "My loans", Companies, the repayment schedule, the statement.	27 Oct

What	Before	After	Date
Status sorts by what needs you first	(Reports sorted status A to Z: Approved, Disbursed, Pending...)	Status and Repayment sort in the order of the work: overdue loans first (Delinquent, Escalated, Defaulted), then loans waiting for a decision (Pending), then Approved (to pay out), then loans being repaid, then Paid, then closed ones (Written off, Declined). Reports uses the same order now.	27 Oct
A Due column on All Applications	The due date was only on the dashboard and in Reports.	Shown for loans that are still being repaid (red when overdue); a repaid loan shows a dash. Sort by Due to see what is due soonest. The dashboard's Loan pipeline shows its due date the same way (it used to show an old due date even for repaid loans).	27 Oct
The dashboard's Approve, Reject, Disburse and Mark paid buttons	In the Loan pipeline, "Mark paid" (and the other row actions) were small plain pieces of text that did not look like something to press, and the result came as a browser pop-up message.	They are real buttons: **Approve** is solid green, **Reject** is outlined red, **Disburse** is solid navy, and **Mark paid** is a small outlined green button (it appears on every open loan, so it is the quietest); each has an icon (except Mark paid), a hint on hover (for example "Record this loan as fully repaid. The borrower is emailed."), a pressed look, and a keyboard focus ring. While the platform is sending the change the button shows a spinner and cannot be pressed again, so one click is one change. The result appears as a short message on screen (a failure says why and the button works again). A loan that is already repaid shows a quiet green **Paid** tick instead of a button. On a phone the buttons are 44 px tall so they are easy to hit. Nothing about what the buttons do has changed.	27 Oct
Entering or correcting a disbursement date	There was no way to give an older loan its disbursement date, or to fix a wrong one.	Next to each disbursed loan's date, a small **pencil** (or **Add date** where none is recorded) opens a short form: pick the date, add a reason if you like, and save. The date you enter **takes the place** of the one the platform recorded, and the card says "Entered by hand" when you rest the pointer on it. **Remove the date I entered** brings the platform's own date back (or "date not recorded"). Every entry, correction and removal is written in the loan's change history with who did it, and in the audit trail. A date in the future is refused. A date earlier than the day the loan was applied for on the platform shows a gentle note (that is normal for loans from before the platform) and can still be saved. It is **a record only**: it does not change the loan's balance, interest, due date, reminders or reports.	25 Oct
A loan the borrower still owes on is flagged when they apply again	A part-paid, late or defaulted loan does not stop someone applying again (only an "unpaid" one does), but nothing told the person deciding.	On the application's page a note names the borrower's other loan(s) that are part paid, late or in default, with what is still owed, the due date and a link to each (admins only, until the money is paid out). It is amber for part-paid loans and **red** as soon as one is late or in default. The All Applications list marks that borrower's waiting applications with an **Owes on a loan** tag. A repaid loan, a declined application and an "unpaid" loan (which already blocks a new application) are not flagged.	29 Oct
A Paid / Unpaid filter on All Applications	You could filter by status, type, company and date, but not by whether a loan had been repaid. The repayment column shows "Unpaid" on every new and every declined application too (it is the starting value), so a plain "unpaid" list would have been mostly applications that owe nothing.	A **Repayment** filter next to the search box. **All unpaid** means a loan that was paid out and is not fully repaid; it splits into **Nothing paid yet**, **Part paid** and **Late or in default**. **Paid in full** is the other side. Waiting, declined and written-off applications are in none of them. Each option shows how many it would list (given the other filters you have set), and while an unpaid option is chosen the top of the page says how much is **still owed** on the loans shown. The address can carry the choice (`/admin/applications?repayment=late`) so other pages can link to it. It works together with the other filters and with the dashboard's Overdue link, and **Select all** follows it (for example, select the repaid ones and mark them paid).	29 Oct

What	Before	After	Date
Uploaded documents on the applicant's page	Every document showed both **Accept** and **Reject**, even after you had accepted it, and long file names were squeezed down to a few letters.	A document you have accepted shows **Accepted** (with your note) and no buttons; only new documents show Accept and Reject. File names get the full width of the card (up to two lines), with the buttons on their own row below. The review prompts now say what Reject really does: it **deletes the document** and emails the applicant to upload a new one.	25 Oct
Scrolling on the applicant's details page	After the statement tool was added (25 Oct), the whole screen could scroll up into blank space, so the content seemed to cut off partway down and the top bar disappeared. On phones, large amounts in the statement totals ran outside their boxes.	The page scrolls only inside its own area, the top bar stays in place, and the totals fit on every screen size, even for amounts in the millions. The same safeguard now protects the HR, finance and applicant portals.	25 Oct
Financial Analysis page	Its upload, analysis, chat and PDF buttons contacted the wrong place on the live site.	They work against the right server. A "no transactions" result is shown as a message, not as a corrupt PDF download.	22 Oct
"Score Factors" on the Financial Analysis page	The box that is meant to explain a credit score (for example "High Fuliza dependency -50") was always empty, so the page showed a score with no reasons. The AI summary also never received those reasons.	The reasons now show next to the score, and the AI summary is given them.	25 Oct

12. Calculators

What	Before	After	Date
Amortization calculator	It crashed after pressing Calculate. The PDF and Excel buttons failed. "Reducing balance" quietly calculated a flat loan instead. A 0% rate or 0% fee was treated as 10% or 3%. The PDF header showed a placeholder address and phone number.	It works. The schedule shows month, due date, principal, interest, payment and balance. Reducing balance is really reducing. A 0% rate stays 0%. Wrong inputs get a clear message. The PDF header carries Leocap's details.	22 Oct

13. The public website

All the **wording is unchanged**; the design, links and readability were improved.

What	Before	After	Date
Home page	A dark, hard-to-read photo banner. Uneven cards. Small text on phones. Several links went nowhere. The contact form's "Send Message" did nothing.	A clean redesign on the Leocap navy. Readable text. Equal-height cards. A step-by-step "How it works". "Apply" goes to registration. The email, phone and address are tappable. "Send Message" opens the visitor's own email program, addressed to you.	23 Oct
Registration details	None shown: you had no registration number to quote.	The footer of every public page now says: a **registered business name, No. BN-8MCJ9DR** (Registration of Business Names Act, Cap. 499), and **registered with the Office of the Data Protection Commissioner as a data controller, ID 827-486A-00F0**. The Privacy Policy page opens with a small box naming the data controller (your business name, the Commissioner ID, the business number and the P.O. box). The search engines are also given the legal name and the business number. Everything was copied from your three certificates; we could not check it against the registry's own system. No lending licence is claimed, and the proprietors' names and personal details are not shown.	30 Oct
Terms and Conditions	No such document. The loan forms said "I have read and accepted the Loan Agreement and Terms & Conditions", but there were no Terms & Conditions to read.	A new page, **Terms and Conditions** (`/terms-and-conditions`), in the same look as the Privacy Policy and opening with a small box saying who runs the platform (your business name, the business number, the P.O. box and the email). It covers using the website and an account: who can use it, your account, the information and documents a borrower gives, applying and approval, the Loan Agreement, repayment, acceptable use, messages, availability, suspending an account, our responsibility, changes, complaints and disputes, and contact. **It does not repeat any fee, rate or charge** (those stay in the Loan Agreement, so the two can never disagree), and where the two differ about a loan the Loan Agreement wins. It is linked from the footer, the sign-in and sign-up pages, the "Is it safe?" answer of Leo, and from the words "Terms & Conditions" on all four loan forms. **Sign-up now has a second tick box** for the Terms, next to the existing one for the Privacy Policy (the loan forms already keep the two apart). The text is a **draft written from what the platform does, not legal advice**: please read decision 29.	30 Oct
Opening section of the home page	A photo of a person under a dark layer: it was the loudest thing on the page and said nothing about the loans.	**No photo.** A deep navy background that is slightly lighter in the middle and darker at the bottom, with a faint grain so it looks like a surface rather than a flat colour, and one soft blue glow: behind the "3 steps" card on a computer, behind the **Apply for a Loan** button on a phone. The headline now sits on **two lines**, so the button moves up and is on screen without scrolling on every size we tried (a small laptop, a tablet, a small phone). Red is used only for the Apply button and the headline accent, so your eye goes: headline, Apply, the three figures. The small line above the headline ("Trusted Fintech · Nairobi, Kenya") is now a quiet label with a thin red line, not a badge with a pulsing dot. Every text colour was measured and passes the readability test (the faintest is 4.8 to 1 for the white text on the red button, the rest 6 to 13 to 1). The page loads no slower and about 60 KB less is downloaded. **On a tablet:** upright tablets get a larger headline on two lines and a hero that no longer stretches over the whole tall screen (the next section starts in view); a tablet held sideways gets the same two-column look as a computer, with the "3 steps" card.	30 Oct
Hero statistics	A busy boxed strip with icons.	A calm single row of numbers.	23 Oct
Menu bar	Basic.	Compact; a thin progress line; a **Dashboard** button when you are signed in; on phones, a full menu and a one-tap **call** button.	23 Oct

What	Before	After	Date
Top strip	Nothing above the menu bar.	While the home page or the FAQs page is at the very top, a slim dark-navy strip sits above the menu bar. On the left, ways to reach a person: your first phone number (tap to call), your **opening hours**, your email and your Nairobi address (a link to the map), all read from your contact details in Site content, so an edit there shows here too. The strip shows less on narrower screens so that nothing is ever cut off: the opening hours from tablet width, the email from a small laptop, the address from a wide screen. On the right, for people who have already applied, **Track application**: if they are signed out it takes them to sign in and then straight to their list of applications; a signed-in applicant sees **My applications**; staff (admin, HR, finance) see only the contact side. The strip slides away on the first scroll and returns at the very top. On a phone the menu bar already has a one-tap call button, so the strip does not repeat the number there: it shows **Documents needed** (a link straight to the FAQ checklist of what to have ready, which people can photograph on the spot) beside Track application. The strip is exactly as tall as a one-line announcement banner (about 28 px on a phone, 31 px on larger screens), so the two match when both show. While an announcement banner is switched on, phones show only the banner; larger screens show both. **Opening hours (29 Oct):** the line is "Mon–Fri 8 am–5 pm" (weekends are simply not listed, as you asked). It is one short line of text you can change under Site content, Contact details (up to 40 characters; leave it empty to show none). It is plain text, not a live "Open now" label, because a public holiday would make a live label wrong. On a phone the strip only has room for two items, so the hours are on the **Call us** card in the phone menu, under the number. The strip says nothing about rates or licences.	28 Oct, hours 29 Oct
Footer	A plain block with dead links.	Working links, **Apply Now / Sign In** buttons, and a **back-to-top** button.	23 Oct
FAQ page	None.	A new **FAQs** page: search, topics, a checklist of documents for each loan type, a guide to loan statuses, and a link to any single answer. It deliberately quotes **no loan limits, rates or fees** (see Section 15).	23 Oct
Testimonials	Three unverified placeholder quotes existed in the program (they were never shown to visitors).	A designed testimonials section is **ready but hidden**. It shows **only real, approved quotes**, which you add yourself under **Site content** (Section 13.1). None are shown today.	23 Oct
Editing the words	Every word, phone number and email on the public pages was fixed in the program: a change meant asking a developer.	An admin can edit the contact details, an announcement banner, the home page text (opening section, loan products, how it works, section headings), the testimonials, the FAQs and the Privacy Policy on a new **Site content** screen (Section 13.1). Until you publish something, every page says exactly what it said before.	25 Oct

What	Before	After	Date
Headline typeface	One typeface (Plus Jakarta Sans) for everything.	A second, **Outfit**, now sets the big headlines, section titles, the hero figures, the small capital-letter labels and the main buttons on the public pages (home, FAQs, privacy policy, page-not-found), on the sign-in, register and password pages, on every borrower page (dashboard, applications, an application, profile, calculator, apply forms) and on the HR and finance portals, from the headings to the Submit buttons. The title of a pop-up dialog uses it too. It is rounder and more distinctive, chosen after looking at the font on a reference site you showed us, which uses a paid font; Outfit is the closest **free** one, so there is no licence to buy. Body text, forms, tables, money lists and the menu are unchanged, and so are the admin pages (only the titles of the admin's pop-up dialogs changed, because they share one dialog component with the rest). Headings occupy the same space as before (checked on phone and desktop widths), nothing jumps while it loads and the page loads no slower.	30 Oct
Readability	Some grey text was too faint to read comfortably.	All public and sign-in text was measured and meets the standard readability test (WCAG AA).	22-23 Oct

13.1 Editing the public pages yourself (Admin menu, Site content) (25 Oct)

An admin can change some of the words on the public pages without a developer. **Nothing a visitor sees changes until you press Publish.**

Section	What it controls
Contact details	The email, phone numbers, address, map link and (since 29 Oct) opening hours. They are used in the page header, the footer, the home page contact section, the sign-in and sign-up pages, and the FAQ answer "How do I reach you?". Change them once and all of those follow.
Announcement banner	A coloured notice across the top of the home and FAQ pages (for example planned maintenance), with an optional link. Three colours: information, warning, good news.
Testimonials	Client quotes. A quote is shown to visitors **only when you tick that the client agreed to be quoted by name**; quotes without the tick stay private and never leave the server. The section stays hidden until at least one is ticked and published.
Home page: opening section	The badge, the two headline lines, the introduction (with bold words), the two button labels and the **three numbers** (for example 500+ clients served). The glass card beside the headline repeats the first loan product and the three step names, so it follows those.
Home page: loan products	The Products headings and **one to three cards**: title, small heading, description, up to five points, and the **Most Popular** and **Coming Soon** switches (only one card can be Most Popular).
Home page: how it works	The three steps (name and text) and the "Ready to get started?" band under them.
Home page: other headings	The headings of the Contact and Testimonials sections.
Privacy policy	Every section of the policy: add, remove, reorder and edit them. Section numbers follow the order. The text has bold, bullet and numbered lists, small headings and a boxed block (used for the Data Protection Officer's details); the editor can fill in the current email, phone numbers and address for you. Buttons are not allowed in it.
Terms and conditions	The same editor as the Privacy Policy: add, remove, reorder and edit sections (numbered by position), with bold, lists, small headings, the boxed contact block and the Insert buttons. Until you publish, the page shows the text that came with the site; **Reset to built-in text** brings it back.

Section	What it controls
Loan agreements	The two agreements a borrower accepts when applying: **Salary Advance** (HR and finance staff accept the same text for their own loans) and **Personal Loan**. Each has a title, an opening paragraph and lettered sections you can add, remove, reorder and edit; lines appear exactly as you break them. In the Salary Advance one, type `{{employer}}` where the borrower's employer should appear. There is no "preview on the site" for these (they appear inside the application forms); the editor shows **what the borrower will see** instead. **Read Section 13.4 first: it explains what happens to borrowers who have already accepted.**
FAQs	Edit, add, remove and reorder questions; choose the topic and which ones are "popular". Answers can have bold text, links, numbered steps, bullet points and buttons, with a toolbar and a live preview. Two ready-made pieces (the document checklist and the loan-status guide) can be added to an answer and always follow the platform's real rules.

How it works

1. Open a section and change it. **Save draft** keeps it private.
2. **Preview on the site** opens the real page with your draft in a new tab (a dark ribbon says you are previewing; only you see it). **Exit preview** ends it.
3. **Publish** makes it live. Visitors see it within about a minute.
4. **History** lists every published version, who published it and when. **Restore as draft** brings an old one back (it goes live only when you publish it). **Discard changes** throws away an unpublished draft. **Reset to built-in text** returns that section to what the program shipped with.
5. Every save, publish, discard and reset appears in the **Audit Trail** in plain words.

Safety. The editor accepts plain text only, never code. Links may point to a page on this site or start with https://, mailto: or tel:; anything else is refused with a plain explanation, and so is a missing answer, a duplicate link name and so on. If two admins edit the same section, the second to save is told and must load the latest version. Unsaved edits are also kept in the browser tab, so clicking to another admin screen does not lose them, and closing the tab warns first. It is **not available in the demo**.

Not editable here: where buttons and links go, pictures, colours and layout, the wording of the menu and footer, the contact form, and the loan terms on the application forms.

What stays exactly the same: with nothing published, every public page was checked against the pages as they were before this change. The FAQ page, the header, the footer and the home page (opening section, products, how it works, contact) are identical down to the last character. The Privacy Policy has exactly the same words, sections and lists in the same order; its spacing is now uniform instead of hand-tuned paragraph by paragraph, so the page is about 1% shorter and one line, "We do not sell personal data to third parties.", is slightly bolder. Two differences are invisible to visitors: the plain-text copy of three FAQ answers that search engines read ("How do I apply?", "How do I track my application...", "I forgot my password") is now built from the answer itself, so its wording is slightly different.

Good to know. The hero card, the first product and the three step names are one set of words, so changing one changes the others. Numbers appear in more than one place on purpose (for example "500+" in the opening section and in the "Ready to get started?" band): change them together. Nothing checks a figure against the calculators.

13.2 Search engines and speed (26 Oct)

The public pages are Home, FAQ, Privacy Policy, Create account and Sign in. Everything below changes how they are found and how fast they open. **The wording and the look are unchanged** (the home page photo was compared with the old one: the difference is below what the eye can see).

What	Before	After	Date
Page titles and descriptions	Every page was called "Leocap Loan App" and had no description, so Google had to guess what to show.	Each public page has its own title and a short description (for example "Salary Advance & Personal Loans in Kenya | Leocap Invest"). They quote **no loan limits, rates or fees** (decision 1). The admin, HR, finance and applicant portals keep the old title.	26 Oct
Link previews (WhatsApp, Facebook, LinkedIn, X)	A shared link showed only "Leocap Loan App".	It shows the page title, the description and a picture with the logo.	26 Oct
Files search engines look for	The server answered "robots.txt" and "sitemap.xml" with the app's own page, which search engines cannot read.	Both files exist. The sitemap lists the five public pages; the robots file asks engines to stay out of the admin, HR, finance and applicant areas and the password pages.	26 Oct
Tab icon	None (browsers showed a blank icon, and Google could not show your logo next to the result).	The Leocap mark, in the sizes browsers, phones and Google ask for.	26 Oct
One address for the site	leocapinvest.co.ke, www.leocapinvest.co.ke and app.leocapinvest.co.ke all showed the same pages, so search engines could list three copies.	Each page names **leocapinvest.co.ke** as its address. The server sends www to it, and marks the app. copy "do not list".	26 Oct
Business details for search engines	None.	The home page tells search engines your name, email, phone numbers and address, taken from **Site content > Contact details**, so an edit there is followed. No ratings, reviews or prices are claimed.	26 Oct
Pages that should not be listed	Nothing told search engines to skip the sign-in areas, password pages or the "page not found" screen.	They are marked "do not list".	26 Oct
Speed: what a visitor downloads first	One 1.4 MB program file holding every screen, including the admin, HR, finance and applicant screens.	The home page downloads only what it needs (about a quarter of the size). Each other screen is fetched when it is first opened, and the sign-in and apply pages are fetched quietly while the home page is being read.	26 Oct
Speed: the home page photo (the photo was removed altogether on 30 Oct, see the opening-section row above)	A 1 MB picture fetched from another company's website (Unsplash) at full size, even on phones, under a dark layer that hides most of it.	The same photo, kept on your own site and made smaller: 42 KB for phones and tablets, 171 KB for computers.	26 Oct
Speed and privacy: the font	The text font was fetched from Google before the page could appear.	The same font, kept on your own site and loaded at once (so a visitor's browser no longer contacts Google for it). The Google map in the Contact section still does, as before.	26 Oct
Speed: the logos	The square logo was 4167 by 4167 pixels (158 KB) and the header logo 39 KB.	14 KB each, same size on screen.	26 Oct

What	Before	After	Date
Open tabs after an update	(New safety net.) A tab opened before an update would have asked for a screen file that no longer exists and shown a blank page.	The page reloads itself once to pick up the new version; if the site is really unreachable it shows a short message with a **Reload** button instead of a blank screen.	26 Oct

Measured on the live site (Google's Lighthouse tool, a simulated mid-range phone on slow 4G, three runs after against one run before): search score **83 to 100**; performance score **64 to 79-81**; first content on screen **4.4 s to 2.8-3.0 s**; the main headline **5.5 s to 3.8-4.0 s**; usable **7.6 s to 3.9-4.0 s**; data downloaded **1,857 KB to 780 KB**; accessibility and best practices stay at 100. **How to read this:** Lighthouse still rates the main headline at about 4 s in its simulation, above Google's 2.5 s "good" mark. In a real browser slowed down the same way, on a test copy, it measured **1.8 s** (2.4 s before). Drawing the page in advance (decision 19) would make real visitors faster still but would not change Lighthouse's simulated number. **Not measured:** real visitors (Google's Chrome UX Report needs more traffic than a new site has), and ranking position, which cannot be measured from here.

Server rules (published 26 Oct, after running on the demo site first). The main address, www and app. share one folder of server rules (a small file called .htaccess). Checked on the live site: www and http go to https://leocapinvest.co.ke; app. pages carry a "do not list" mark; the program files are kept by browsers for a year while pages are always re-checked; each public page answers with its own title; a program file that no longer exists gives a real 404; the rules file itself stays hidden. If a rule ever misbehaves, the previous four-line rule can be put back in cPanel in a minute.

Security check done at the same time. Updated Zod, Vite, follow-redirects and about sixty other packages to their fixed versions: the packages that reach visitors now show **0** known problems. Three moderate findings remain in a build tool (Tailwind) and need a major upgrade; they cannot affect visitors.

Left for you (they need your accounts or facts, so we cannot do them): see decisions 17 to 19 in Section 15.

13.3 Leo, the chat assistant (28 Oct)

A round button with a lion cub, **Leo**, now sits at the bottom right of the public pages (home, FAQs, sign-up, sign-in, Privacy Policy) and of an applicant's own pages. It does not appear for admin, HR or finance, or on the admin sign-in and password-reset pages. Tapping it opens a chat: on a phone it rises from the bottom of the screen, on a computer it is a small window in the corner.

What	Before	After	Date
Help for visitors	A visitor with a question had to read the FAQs, scroll the home page or write an email.	Leo opens with "What do you need today?" and tappable choices (cash before payday, a bigger loan, check my numbers, how do I apply, is it safe, talk to a person). People can also type; he understands everyday English and a little Swahili ("habari", "asante", "mkopo"). Every answer ends with one clear next step: create an account, sign in, or complete a profile.	28 Oct
Where his answers come from	Not applicable.	Money, timing, documents, password and contact answers are **read from your FAQs and contact details** (Site content, Section 13.1), so when you edit them Leo says the new thing with no developer. The only things written into the program are his short introductions.	28 Oct
"Check my numbers"	A visitor could not see what a loan would pay out until they had created an account and filled in the form.	Leo asks for basic monthly pay (a rough figure such as 50,000 or 50k is fine) and shows an **estimate**: the amount, the fees, what would be paid out, and for a Salary Advance what would be repaid. It uses **exactly the same formulas as the application forms**, so the two cannot disagree. A Personal Loan estimate shows the payout **before interest**, because you set that rate after reviewing the application. Every estimate is labelled as an estimate.	28 Oct

What	Before	After	Date
Signed-in applicants	Nothing.	On the applicant dashboard Leo greets them by name, shows how complete their profile is and what is still missing, and offers a button to finish it (or to start an application). Elsewhere he sends them to their dashboard.	28 Oct
First hello	Not applicable.	A small speech bubble appears once, a few seconds after a visitor arrives on the home, FAQs, sign-up or sign-in page, with a line that fits that page (for example "Forgot your password? Leo can help." on sign-in). It goes away by itself, can be dismissed, and is not shown again to the same browser for a week.	28 Oct
Pointing at him (on a computer)	Nothing.	After a moment's pause, Leo leads: he glides a short way out to the left, and a white capsule saying **Ask Leo** follows, flowing out from behind him; its letters fade in one after another as the edge passes them. When it has arrived, Leo lowers his head a little. Everything eases out and settles without any bounce, to match the calm of the rest of the platform. Moving away plays it backwards. It also opens for someone who tabs to him with the keyboard (and screen readers announce it). A phone has no hover, so there it never appears (the one-time hello bubble does that job); for anyone who has asked for less motion the capsule simply appears.	28 Oct
Phones first	Not applicable.	Large thumb-sized buttons, text never smaller than 12 pixels, a typing box that does not make iPhones zoom, a sheet built to stay above the on-screen keyboard, and room left at the end of each page so Leo never covers the last button. Anyone who has asked their phone for less motion sees no animation. Measured on screens from 320 to 1440 pixels wide.	28 Oct
Privacy and honesty	Not applicable.	Nothing a visitor types is sent anywhere or stored on a server: the conversation is kept only in their own browser for that visit. Leo says plainly that he is an **automated guide**, and that figures are estimates.	28 Oct
His look	Not applicable.	Leo was designed with Google's Stitch design tool: a lion cub whose mane uses the red-orange of your logo, on your navy. He changes expression (greeting, thinking, happy, celebrating, winking) as the conversation moves. The white rim around him is made to behave like the surface of water with a little wind across it. It is a still, perfect circle at almost all times. When something is going on, fine ripples run across it all in the same direction, strengthening in gusts and easing in lulls, as on a pond: for his first seconds on a page (a light breeze, and the badge rocks gently), while the hello bubble shows (a stronger gust, and ripples drift off towards the bubble, the way the wind blows, as Leo tips his head to wave), when someone points at or touches it, and while he is "typing" in the chat. When an estimate arrives a splash of rings spreads from his badge and he cheers. The water settles smoothly afterwards and nothing keeps running. Nothing moves for anyone who has asked their phone for less motion.	28 Oct

13.4 The loan agreement, and a real record of what each borrower accepted (30 Oct)

	Before	After
Where the agreement lived	Typed into four application forms and a fifth time into the debt dossier. The dossier always printed the Salary Advance text, even for a Personal Loan.	One place: **Site content > Loan agreements** (two agreements). Published versions are kept in the history and can be brought back as a draft. Until you publish, the text that came with the system is used (identical to what the forms said).
What was recorded when a borrower accepted	Nothing. The dossier said "IP Address / Device: Verified via authenticated session" (a fixed sentence, no address or device) and showed the time the application was made as the time of acceptance.	**For every new application:** the exact text the borrower was shown (with their employer filled in), the exact time of acceptance (shown in East Africa Time), which version it was, the address and device it came from, a random **reference** (for example LA-7K2M-9QXD-4WBR) and a **seal**.

	Before	After
Your loan page	Nothing.	A **Loan Agreement Acceptance** section: when, which version, address and device, the reference, and **Record Check**: "Matches its seal: not changed since it was made" (or a red warning that it was changed).
The debt dossier	The fixed sentence above.	Prints the exact text that borrower accepted and the record: accepted on, version, address and device, reference, the seal's first characters, and whether the record **still matched its seal when the file was produced**.
When you change the agreement	Not possible without a developer.	Only applications made **after you publish** use the new text. A borrower who is reading the form when you publish is not caught out: the form shows them the new text, **clears the tick they had given to the old one** and asks them to accept again; if they press Submit before the page refreshed, the server refuses it with the same message. Earlier borrowers' records never change.
Applications made before 30 Oct	No record existed.	Still no record (it cannot be recreated). Their dossier prints the built-in text of the right kind (a Personal Loan now gets the Personal Loan text, not the Salary Advance one), leaves out the 10% late-payment clause for loans applied for before 26 Oct 2026 as before, and says **"Not recorded: this application was made before acceptances were recorded"** instead of the earlier claim.

How the seal works, in plain words. The platform calculates a code from everything in the record (the text, the time, the address, the reference and so on) using a secret that only the server holds. If anyone changes any detail afterwards, the code no longer matches. The random **reference** is the code you quote or look up; the **seal** is what proves nothing was altered. Please keep the server's secret key (`SECRET_KEY`) safe and **never change it**: if it changes, older seals can no longer be checked.

What this is not. It is not a certificate-based digital signature that a court or a third party can check without us (that needs a certificate authority or a signing service, costs money and adds a step for the borrower). It is a tamper-evident record kept by the platform. Please ask your lawyer whether it is enough for how you recover loans, and have the **first change you publish** checked by them.

14. Looks and phone-friendliness

What	Before	After	Date
Text on phones	All text was shrunk too small.	Normal readable size.	15 Oct
Buttons on phones	Too small to tap comfortably.	Large enough to tap.	15 Oct
Home page banner	Hard to read.	Readable.	15 Oct

What	Before	After	Date
Hover hints on icons and buttons	The small hints that appear when you rest the pointer on an icon came from the web browser: they took over a second to appear, looked plain, did not show when using the keyboard, and did not appear on greyed-out buttons.	One consistent hint style everywhere (dark navy with a small arrow). Hints appear after about a third of a second, and straight away when you move from one icon to the next. They also appear when you tab to a button with the keyboard, work on greyed-out buttons, and are never cut off at the edge of the screen. Names and emails that are shortened with "…" show their full text on hover, and only when they really are shortened. The collapsed side menu names each destination.	25 Oct
Admin, HR, finance and applicant portals	Each looked slightly different. Raw status words such as "pending_processing" appeared. Dates were blank on some pages.	One consistent, compact look. One set of status names and colours ("Pending Review", "Disbursed" in blue, and so on). Amounts shown as "Ksh 12,000.00". Dates fill in.	22 Oct
Every screen checked on phones	Nothing had been checked screen by screen.	All 65 screens (public pages, the sign-in pages, and the admin, HR, finance and applicant portals) were opened on a simulated phone at three widths (320, 375 and 430 px) and measured. No screen scrolls sideways or has anything cut off at the edge. The side menus, the user menu and the Add Company pop-up were checked on a phone-sized screen too (the other pop-ups share that frame but were not each opened).	27 Oct
iPhone zooming in when you tap a box	Tapping any text box, drop-down or notes field made iPhone Safari zoom the whole page in and stay zoomed, because the text inside them was smaller than 16 px. It happened on more than half the screens.	Every text box, drop-down and notes field is 16 px on phones, so the page stays where it is. Long search hints that did not fit now end with "..." instead of being cut mid-word. Desktop is unchanged.	27 Oct
Tiny text on phones	Field names and small labels were 10 or 11 px.	12 px at the smallest.	27 Oct
Links that were hard to tap	Small links ("View all", "Site content" at the top of an editor, "Forgot password?", "View" in the audit trail, the phone numbers and email in the footer, the logo) were 14 to 32 px tall; some buttons made of links ("Apply for Loan", "Complete Profile", "Go Home") were 28 to 39 px.	Small links keep their look but answer a tap in a larger invisible area; link-buttons are 44 px tall on phones. The rows of every side menu (admin, HR, finance, applicant), the user menu and its picture are 44 px.	27 Oct
Menus and pop-ups on iPhones	The side menus and pop-up windows were sized to the screen with the browser's address bar hidden, so on an iPhone the bottom (Sign Out, a pop-up's buttons) could sit behind it.	They are sized to the screen that is actually visible.	27 Oct
"Complete your profile" banner	On a narrow phone its button squeezed the text and the "Personal" and "Documents" percentages printed on top of each other.	On a phone the button drops below the text; nothing overlaps. Desktop is unchanged.	27 Oct
Small fixes	The "View all" link on the HR and finance dashboards split over two lines; the FAQ search hint was cut off; "Select all 152" squeezed the sort menu on All Applications.	One line; a shorter hint; the count is left out on phones (the page already says "152 applications").	27 Oct

What	Before	After	Date
Sign-up page	The form asked for the password twice. The side panel said "about a minute" and "you can sign in as soon as it is created" in more than one place, and a step list kept ticking off steps the visitor had not done. On a laptop the Create account button sat below the bottom of the screen.	One password box (the eye button shows what was typed; a forgotten password is reset by email as before). Each message appears once, the step list stands still at step 1 with bold step names that stand out from the text under them (the same card is used on the forgot- and reset-password pages), and the company box says "Your company (or Personal)". The button now fits on a laptop screen and sits about 105 px higher on a phone. What is sent to the server is unchanged. After signing up, the sign-in page opens with your email already filled in (on a computer the cursor is already in the password box), so you only type the password.	27 Oct
Sign-in pages	The portal name appeared three times, an Admin tab sat above every applicant's form, the password box repeated its own label, and the side panel carried a moving example card (shown to everyone, even people who sign in every day) and a paragraph that repeated the headline.	The form starts about 100 px higher: on a laptop the whole page fits without scrolling, and on a small phone the Sign in button is on the first screen. Administrators reach their sign-in through a small "Admin" link in the line at the bottom of the page (next to Privacy policy and FAQs), and back through "Applicant or staff? Sign in here". On a narrow phone that bottom line puts the copyright on its own row so nothing breaks mid-word. The side panel keeps the headline and the help line (FAQs, email, phone). People the page is new to (a browser that has never signed in, or someone who has just signed up) also see an example card that walks slowly through the loan statuses they will meet on their dashboard, to show the journey (it stands still for anyone who has asked their device for less motion); people who have signed in before on that browser do not see it, and the admin sign-in has none. The password box has no hint text, since it is already labelled "Password".	27 Oct
Link to Leocap Consultancy	The consultancy's site linked to the platform, but the home page had no link back.	"Leocap Consultancy" in the footer and a "Business tax & accounting" line in the Contact section, both opening home.leocapinvest.co.ke in a new tab. See Section 15, question 20.	27 Oct
First click on a link did nothing (sign-in and sign-up)	With the cursor in an empty box, the first click on "Sign in", "Create an account", "Forgot password?", the eye (show password) button or "Admin" did nothing: the box checked itself, its error message pushed the link down, and the click missed. The second click worked.	Every link and button on these pages works on the first click, and the boxes still show their messages as before.	27 Oct

What	Before	After	Date
Applicant pages on a phone (second pass)	A fresh measurement of the applicant's pages on 320, 375 and 430 px phones found: the dashboard's "Outstanding balance" amount ran out of its box (by 21 px on the smallest phone); the bottom menu's "Applications" and "Calculators" labels touched or overlapped; "My Applications" called every salary advance a "Personal Loan" except for two companies; the profile's "Done" broke into "Don / e", its email split in the middle of a word and it showed an emoji; the dashboard's "Approved" count ignored loans already paid out (4 loans: "Approved 0"); the calculator showed a green negative "Disbursement" before anything was typed; the application page left a lone "Last updated" card; the top bar was empty.	Each amount now sits under its label so it can never run out of its box; the phone menu reads Dashboard, Apply, Loans, Calculator, Profile (full words on larger screens and for screen readers); the list says "Salary Advance"; "Done" stays on one line, the email wraps after the @ or a dot and the emoji is gone; "Approved" counts paid-out loans (Total 4, Approved 4); the calculator shows a dash until an amount is entered; "Last updated" spans the row; the Leocap logo sits in the phone's top bar.	28 Oct
Applicant home page: a "next step" card	A dark card with a greeting, an Apply button and three figures; two separate warning banners further down; four count boxes that did not add up ("Approved 0" for someone with four paid-out loans). Nothing said what to do next.	The top of the home page now says the ONE thing that matters for that person, in a colour that fits how urgent it is: finish your profile (and what is still missing), review the rate we set, "KES 19,800 due in 7 days" (amber when close, red when late), "your loan is approved", "we are reviewing your application" or "you are ready to apply". It links to your FAQ answers (for example how repayment works) and states no timeline of its own. On phones the three figures are a short list under the card; the count boxes read Active, In progress, Repaid and Declined, and a newcomer with no loans sees none. **"Outstanding balance" now allows for part payments and collection fees, so it matches the loan page** (it used to add up the original repayment amounts: a borrower who had paid part of a loan saw too much).	28 Oct
Application page: where it is, and what happens next	A long list of details, the status as a small badge and a note at the very bottom.	A five-step tracker (Submitted, Review, Approved, Paid out, Repaid) with, under it, what happens next in plain words: "Your move: review the rate" (a button takes you to it), "KES 19,800 to repay by 30 Oct" (amber when close, red when late), "Approved: we are preparing your payout", "Fully repaid. Thank you!", or "Not approved this time" with a way to apply again. Then the money first (loan amount, what you receive, total to repay, due date), the loan's details, and your own details folded away. The old notes at the bottom, now said at the top, are gone.	28 Oct
Salary advance form on a phone	Five greyed-out personal fields before the first thing to type; the figures only at the end; leaving the page lost everything typed; if a detail from the profile was in the wrong format the form refused to send and said nothing.	Your details are one folded line ("Applying as Wanjiku Kamau, ID ending 652"). A bar stays in view above the menu with what you would receive and the total you would repay, and the Submit button. What you type is kept while the browser tab stays open (never your profile details or your ticks, and it is gone when the tab closes), with a "Start over" link. A problem with a profile detail is named and links to the Profile to fix it. Leo's button stands above the bar. The personal-loan application (several steps) keeps its layout for now.	28 Oct

What	Before	After	Date
The Apply tab	It always opened the form. Someone with a loan still to repay, or an application waiting for a decision, filled in everything and was only then refused.	It says so first ("You have a loan to repay first" or "You already have an application in progress") with a link to the loan or the application.	28 Oct
My Applications: filters and due dates	One long list, with no sign of when a loan is due.	Filter buttons (All, Active, In progress, Repaid, Declined, each with its count) once there are four or more loans of more than one kind, and a label on a loan being repaid: "Due 4 Nov", "Due in 2 days" (amber) or "Overdue 35 days" (red). The home page's counts use the same grouping, so the two always agree.	29 Oct
Profile: documents at a glance	A document's state was an icon, repeated by a row of small chips at the bottom; the two progress bars sat at different heights when a label wrapped; the hint said "PDF only" although photos are accepted.	Each document shows a clear label (Uploaded, Needed, Ready to upload or Locked); "Choose file" sits under the text and is full width on a phone; the repeated chips are gone; the two bars line up; the hint reads "PDF, JPG or PNG".	29 Oct
Your loan limit	An admin can set a limit for a borrower, but the borrower only found out when the server refused an application.	The home card says "You can apply for up to KES 150,000" when they are ready to apply; both application forms show "Your limit is ..." under the amount, and warn when the amount is over it; the calculator keeps to it.	29 Oct
Apply again	A borrower with a repaid loan started a new application from nothing.	The home card and the repaid loan's page offer **Apply again**: the form opens with the employment details, designation and amount filled in, and says so. The pay figures are never copied (they change every month, and an old one would give a wrong amount); anything the borrower was already typing takes priority.	29 Oct
"How much could I get?" calculator	The applicant's Calculators page was the staff calculator, with rates, fee switches and "Gross loan".	A borrower's own page: one pay figure, what they could borrow, a slider for the amount, and plain "You receive / Fees taken / You repay" lines, using the same maths as the application forms and Leo. For a personal loan it says the repayment is set after review. Staff keep their own calculator.	29 Oct
A complete profile showed as incomplete (fixed)	The home page (and the HR and finance dashboards) could say "complete your profile" for a profile that was complete, depending on timing: the check did not refresh when the profile arrived from the server.	It updates the moment the profile arrives.	29 Oct
The look of the applicant's pages	Indigo menu and blue gradients that did not match the website, tiny 11 px labels, spinners, flat cards, no marker for the current page.	The website's navy on the menu and the top card; a red marker for the current page (menu and phone tab bar); 12 px labels; larger figures and titles; rounder cards with a soft navy shadow; loading skeletons instead of spinners; counts that count up once; one friendly "nothing here yet" for empty lists; the main buttons (Submit, Start my application) in the same red as the website's Apply Now. The salary advance form no longer says "Ideon Limited" to someone from another company.	29 Oct

15. Decisions waiting for you

These need your input. Nothing here is broken, but each affects what customers or your accounts see.

#	The question	Why it matters
1	**What should the public numbers say? Settled (29 Oct).** You confirmed the home page cards: the Salary Advance says **"up to 30% of gross salary"** (corrected from "50% of net salary"; it matches the platform's own calculator, about 30% of average pay), and the Personal Loan keeps **"up to KES 500,000"** and **"1 month tenure"**, with the personal loan form offering its 1-month or 6-month option. Nothing more to change on the cards.	The FAQ still quotes no figures. Say if you want the FAQ answers to state them as well (they are edited under Site content).
2	**Real testimonials.** Add them yourself under Site content, Testimonials (Section 13.1), once the person has agreed to be quoted by name.	The section stays hidden until then.
3	**Licence or registration line in the footer. Settled on 30 Oct:** from your three certificates the footer now shows the registered business name number and the Data Protection Commissioner registration (Section 13). It does **not** show a lending licence, because none of the certificates is one (see decision 27).	Lenders are often expected to show it.
4	**Nakama repayment reports show two different bank accounts.** The report HR downloads names a different account holder than the report the admin downloads. This was kept as it was.	Borrowers could be told to pay the wrong account. Please confirm which is correct.
5	**Should interest be chargeable on a delinquent loan?** It is blocked today (the 10% late-payment charge, and later the 15% fee, are added instead).	Your rule decides whether it is allowed.
6	**Penalties and fees in your income figures.** See Section 16, last point.	Your income and "expected back" totals leave them out.
7	**The contact form** opens the visitor's own email program. A form that delivers straight to your inbox would need more setup.	A visitor without an email program configured sees nothing happen.
8	**A hidden marker in every page.** The platform places a coded copy of the signed-in person's email, role and date in the page. The key to decode it is inside the site, so anyone who looks can read it.	Keep it (and tell us what it is for), or remove it.
9	**Admin accounts have no "forgot password" email.** Only applicants, HR and finance do.	An admin who forgets must be reset by a developer.
10	**Home-page photo** was borrowed from an image website.	**Settled on 30 Oct:** the photo is gone; the opening section is now a plain navy background (Section 13), so there is nothing left to borrow or to disappear.
11	**Server tidy-up:** copies kept for safety (database tables starting `bak_2026`), a few leftover test files, and a recommended extra protection on the hosting account for configuration files.	Housekeeping, not urgent.

#	The question	Why it matters
12	**Please read the new loan-terms wording and confirm it.** It is in the application forms (Salary Advance, HR, Finance, Personal Loan) and the loan agreement in the debt dossier. Things for you to decide: (a) The terms already had a **rescheduling fee** (10% of the instalment or KES 1,500, whichever is higher). The platform does not charge it automatically; the new 10% late-payment charge is a separate item worked out on the whole balance with no KES 1,500 minimum. (b) The 15% recovery fee line says it follows a **demand notice**: **settled on 29 Oct**, the platform now charges it when you press Escalate (the demand notice) instead of automatically on the 8th day. The sentence inside the demand notice itself ("levied following lapse of seven (7) days after default") was not changed: please have it checked. (c) The **Personal Loan** terms do not mention the 15% recovery fee at all (only for returned cheques), yet the platform charges it. (d) The **company MOU** (clause 9) still describes only the 15% fee. It was left alone: the MOU is a signed contract with each employer. (e) Loans applied for **before 26 Oct 2026** are not charged the 10%. (f) **From 30 Oct you can edit the agreement text yourself** (Section 13.4): the first change you publish should be checked by a lawyer.	Charging something the signed terms do not state can be disputed. These wording choices are a legal matter, so a lawyer should look at them.
13	**Your first two clients' names are built into some screens.** The Admin Applications page has "Mark Nakama Paid" and "Mark Ideon Paid", the salary-advance form assumes Ideon unless told otherwise, and some labels name them. A third company works, and most screens show generic labels for it, but not all.	Decide whether to make these generic as more companies join.
14	**Who may open and reset the demo.** Today anyone who has the link can open it and sign in with one click, and any admin sign-in can press Reset (once every 3 minutes). Search engines are told not to list it.	Fine for presenting. Tell us if you want a shared access code, or Reset limited to you.
15	**The map on the home page.** It searches for "Applewood Adams, Ngong Road, Nairobi" (the word "Along" is missing), which shows several pins around Adams Arcade. Searching for the full address, "Applewood Adams, Along Ngong Road, Nairobi", centres the map on Applewood Adams. We left it exactly as it was.	Say if you want it changed (one line). If you edit the address under Site content, the map follows the new address.
16	**Confirm the postal box in the Privacy Policy.** The Data Controller section (Section 2 of the policy) now shows your real email, phone numbers and address, taken from **Site content > Contact details**, plus **P.O. Box 184-00100 GPO, Nairobi**, the box named in your loan agreements.	If that box is not current, change it under **Site content > Privacy policy** (it is typed into the policy, not part of the contact details).
17	**Tell the search engines the site exists.** Sign in to Google Search Console and Bing Webmaster Tools with a company account, add leocapinvest.co.ke, verify it (a small tag or a DNS record) and submit https://leocapinvest.co.ke/sitemap.xml. Create a Google Business Profile for the Nairobi office.	Without this, search engines find the site slowly and you see none of their data. We cannot do it: it needs your Google and Microsoft sign-ins. Tell us the verification tag and we add it.
18	**Trust information a lender should show. Update 30 Oct:** you sent your registration documents, so the registered business name number and the Data Protection Commissioner registration are now shown (Section 13). No lending licence is shown and none has been invented. A Terms and Conditions page was added on 30 Oct (decision 29). Still useful when you have them: social media links. **Please confirm with a lawyer** whether Kenya's Central Bank rules for digital credit providers (the Digital Credit Providers Regulations, 2022, in force since 18 September 2022) apply to your salary advance and personal loans: they require a licence from the Central Bank for digital lending. This is not legal advice from us.	Loans are a "your money" topic, so Google weighs who is behind the site, and a licence number, once you have one, is the strongest trust signal. Send it and we add it to the home page, the footer and the search details.
19	**Pre-drawing the home page (optional).** We built and measured it: the headline would appear in about 1.1 s instead of 1.8 s on a slow phone. We did **not** keep it: both are inside Google's "good" limit (2.5 s), and it would remove the scroll animations on first visit, add a step to every publish, and show out-of-date text for a moment after you edit Site content.	Say if you want it anyway.

#	The question	Why it matters
20	**How should the home page describe Leocap Consultancy?** The home page now links to the consultancy's own site, using only its name and the line "Tax, accounting and payroll support for businesses." We do not know how the two businesses are related, so nothing like "our sister company" is claimed.	Say whether you want the link and how it should be described, so that a visitor is not misled about who is behind it.
21	**Leo now shows loan estimates to anyone, before they sign up.** They use the platform's own formulas, so they match what the application form shows (for a Salary Advance, roughly 30% of basic pay becomes the loan). That agrees with the home page's "up to 30% of gross salary" (settled in decision 1).	Nothing to do unless you want Leo's wording changed.
22	**WhatsApp.** Leo offers a one-tap Call button for each of your numbers and shows your email address. Many Kenyans prefer WhatsApp. If one of your numbers is on WhatsApp, tell us which and we will add a WhatsApp button.	An easier way for customers to reach you; it also moves some questions out of phone calls.
23	**Office hours. Settled (29 Oct).** You gave us the hours (8 am–5 pm on weekdays) and the line "Mon–Fri 8 am–5 pm" is on the home and FAQs pages' top strip and in the phone menu (Section 13). They are an ordinary editable line under Site content, Contact details.	Nothing to do. An "Open now" / "Closed, back at 8 am" label was left out on purpose (public holidays would make it wrong); say if you still want it.
24	**A decline used to lock a person out of applying again. Settled (29 Oct).** A declined application is left marked "unpaid" (the starting value), and the rule that stops someone with an unpaid loan from applying counted it, so a person declined once, owing nothing, was told "You have unpaid loans. You cannot apply for a new loan" every time. The rule now ignores applications that were declined, rejected, or whose rate the borrower declined. Everything else is as before: a loan that was paid out and not repaid, and an application waiting for review, approved, waiting for the borrower's rate or being amended, still stop a new application. A loan that is only **part paid** does not stop one (as before, kept on your instruction). Applications already declined need no clean-up.	Nothing to do. Separately, demo only (fixed 29 Oct): the seeded demo phone numbers had spaces ("0721 741 817"), which the application form rejects, so the demo's borrowers could not submit. They are now written without spaces; the live demo picks them up at its next nightly reset (or when an admin presses Reset in the Demo menu).
25	**An SMS code when a borrower accepts the agreement (not built).** The record shows who, when, which text and from where. An SMS code sent to the borrower's phone, typed in before the application is sent, would also show that the person holding that phone accepted.	It needs an SMS sending service and costs a small amount per message. Say if you want it.
26	**Wording for applications made before 30 Oct.** Their dossier now says "Not recorded: this application was made before acceptances were recorded" where it used to say "Verified via authenticated session".	The old sentence claimed something nothing recorded. Tell us if you want different wording.
27	**What your registration documents say, and three things to check with a lawyer.** (a) The Business Registration Service record lists the **nature of business as "Debt collection agency"**, while the platform offers loans. Anyone who validates the number (by sending BRS to 21546) will see that. We did **not** put that wording or a lending licence on the site. (b) The registry's **registered office** is Lenana Court, Lenana Road, Kilimani (P.O. Box 184-00100 GPO), while the site's address is Applewood Adams, Along Ngong Road. We show only the P.O. box, which both share. If you have moved, the registry record should be updated. (c) The certificates are for a **registered business name** with two proprietors, not a limited company, so the footer says exactly that. We did **not** publish the proprietors' names, their personal P.O. boxes, or the registry's Gmail address. Optional: the loan agreement's opening says "a business duly registered under the laws of Kenya": your lawyer may want to add "(Business Name No. BN-8MCJ9DR)"; it can be edited under Site content > Loan agreements, and the first edit should be lawyer-checked.	Whether a business-name registration for debt collection covers lending, and whether a Central Bank digital credit licence is needed (decision 18), are legal questions we cannot answer. A public record that contradicts the product is the first thing a regulator, a bank or a journalist would notice.

#	The question	Why it matters
28	**The small line above the home page headline.** It currently reads "Trusted Fintech · Nairobi, Kenya". "Nairobi, Kenya" is useful: it tells a worried borrower the business is a real place, and on a phone it is the only place the location shows above the page. "Trusted" is praise that costs nothing to write, so visitors discount it, and "Fintech" is a word your borrowers do not use. Options, in the order we would pick: (a) **"Salary advances & personal loans · Nairobi, Kenya"** (says what and where, claims nothing); (b) **"Nairobi, Kenya"** alone; (c) **"Registered in Kenya · Based in Nairobi"**, which is now true of the business name, but only after your lawyer has looked at decision 27 so that it is not read as meaning a licensed lender. You can change it yourself under Site content > Home page > "Badge above the headline" (60 characters at most).	A trust line should be something a visitor can check. The registration number is checkable; "trusted" is not.
29	**Have a lawyer read the new Terms and Conditions before you rely on them.** The built-in text is a plain-language draft built from what the platform really does (your own FAQs, Privacy Policy and Loan Agreement); it names no regulator, claims no licence and repeats no fee. Points to put to the lawyer: (a) **Kenya's Digital Credit Providers rules** (decision 18) may require wording the Terms do not have; (b) the **Loan Agreement says it is the entire agreement and replaces earlier agreements**, which a lawyer should reconcile with Terms accepted earlier, at sign-up; (c) the **"Our responsibility" section** limits liability in ordinary terms and says nothing in it limits what the law does not allow to be limited: check it against the Consumer Protection Act; (d) it promises that **a reply to a complaint comes "as soon as we reasonably can"**, with no deadline: add one only if you will keep it; (e) the sign-up tick box for the Terms is **not recorded** anywhere (the Privacy Policy tick box is not recorded either), and on a loan form only the Loan Agreement text is stored with the acceptance. If you want proof of who accepted which version of the Terms, we can record it the same way as the Loan Agreement; (f) the page shows **no "last updated" date**. To use a lawyer's text, paste it under Site content > Terms and conditions and publish.	A lender's terms are a legal document: a clear draft saves the lawyer's time, but the decision on what to promise to borrowers is yours.

16. Still as before (known limits)

These were looked at and **left unchanged on purpose**. They are listed so you know about them.

- **The Data Protection Commissioner registration runs for two years** (the certificate is dated 09/06/2026 to 09/06/2028). The footer and the privacy page quote it without a date, so please **renew it before it ends and tell us if the ID changes**; a lapsed registration shown on the site would be a false statement.
- **The acceptance seal can be checked only by the platform.** It is made with the server's secret key, not with a certificate anyone can check independently, so it proves a record was not changed but is not a certificate-based digital signature (Section 13.4). If that is ever needed, a public-key signature can be added.
- **Leo is a guided assistant, not an artificial-intelligence chatbot.** He answers what your FAQs, contact details and the loan formulas cover, and offers a person when he does not understand. That is on purpose: he cannot invent a loan term. There is also no count of how many people use him, because nothing about visitors is tracked.
- **"Mark selected as paid"** (the tick-box action on All Applications) credits the loan's **full repayment amount** and does not adjust the balance of a part-paid loan. The two single-loan and company-month routes do it correctly.
- **A borrower's "Amount Paid"** counts only payments recorded against that loan. For some older loans, earlier payments may not be linked, so the figure can look lower than what was really paid.
- **New application emails to HR** have been tested and the sending mailbox has been proven (a test email arrived), but a real application notice has not yet been seen arriving in live use. This is parked until you want to check it.
- **Penalties, the 15% collection fee and the 10% late-payment charge** increase what a borrower owes, but are **not included** in the dashboard's "Interest Income" and "Fee Revenue", nor in a report's "Expected back" figure. They do appear in "Outstanding", the statement and the overdue figures. We can add a separate "Penalties and collection fees" figure if you want one.

- **The old "Reverse transaction" feature** (not shown on any screen) is broken and unused. The new edit and delete tools replace it.
- **Rejecting an uploaded document deletes it for good** (the file and its record) and emails the applicant to upload a new one. There is no "undo"; the prompt now says so.
- **Bulk-uploaded applicants** can use any company code, and any HR user can bulk-create applicants.
- **The server does not yet refuse to start without a proper secret key.** The live server does have one.
- **HR and finance sign-ins can still use the general "amend" tool** on their own company's applicants' loans. The admin screens use it; the HR and finance screens do not (they use "Amend Amount"). It can change any field of such a loan, including its status. It now follows the review rule too, but we recommend restricting it to admins. Tell us if you want that.
- **A company with no finance user** (or no HR user) has nobody to review an HR manager's (or a finance officer's) own loan, so only an admin can decide it.
- **The Site content editor cannot add things the page was not built for**: exactly three hero numbers and three steps, one to three product cards, no buttons or pictures in the Privacy Policy or the Terms and Conditions.
- **A published change reaches visitors within about a minute** (the pages keep a copy for a minute to stay fast). Someone who already has the page open sees it on their next visit.
- **Site content cannot be edited in the demo**; the demo shows the program's built-in text.
- **The Site content editor does not stop you quoting numbers** in an FAQ answer. The built-in answers quote no loan limits, rates or fees on purpose (see decision 1); if an editor adds figures, nothing checks them against the calculators.
- **"Page not found" has a normal status.** An address that does not exist shows the app's "Page not found" screen, but the server still answers "OK" (200) instead of 404, and the screen is marked "do not list". A real 404 would need the server to know every page address, which would have to be kept in step with the program by hand.
- **Search engines see changes to Site content when they next open the page** (Google does this within days). The link-preview text (title, description, picture) is built into the program, not editable under Site content.
- **The page font covers English letters and common punctuation** (Latin). Any other alphabet is shown in the device's own font.
- **Speed figures are from a test copy and a simulation**, not from real visitors (see Section 13.2).
- **Some lists cannot be sorted on purpose**: a borrower's own loans and "My loans" (a handful of rows, newest first is right), Companies, the repayment schedule and the statement (the order is the point).
- **The phone review was done in a simulated phone browser**, not on a real iPhone or Android phone, and only upright (portrait). A real-device check of the sign-in pages and the dashboard is still worth doing.
- **The demo is unavailable for about a minute while it rebuilds** (every night at 3 am, or when someone presses Reset). Everyone using the demo shares the same data, so a change one person makes is seen by the next.
- **The demo's nightly rebuild has been set up but not yet seen running** (its first run is 3 am on 26 October). We will check its log and say so here.
- **The demo's home page is the real public home page**, with its public numbers (see decision 1), while the demo's own data is smaller.

---

17. Change log by date

Newest first. When a change is made, a new line goes at the top.

Date	What changed	Section
30 Oct	**Terms and Conditions page** (`/terms-and-conditions`): editable under Site content like the Privacy Policy, with a built-in draft text that leaves every fee and rate to the Loan Agreement; linked from the footer, the sign-in and sign-up pages, Leo, and the words "Terms & Conditions" on the four loan forms; sign-up has a separate tick box for it; in the search engines' page list and the sitemap; the page that opens with a small "who runs this" box. A lawyer should read it first (decision 29)	13, 15
30 Oct	**Three small look faults repaired** (one cause: the style builder did not read the shared text-display code): the contact box on the legal pages and in FAQ answers was italic, the bullet points in FAQ answers were not grey, and the status labels **Rate Accepted** and **Confirmed** had no pale blue background behind them	13
30 Oct	**The small line above the home page headline is quieter**: a thin label with a red line instead of a badge with a pulsing dot (smaller, and about 47 px less height above the headline); wording options in decision 28	13, 15
30 Oct	**Registration details on the site** (from your three certificates): the registered business name number and the Data Protection Commissioner registration in the footer, a data-controller box on the Privacy Policy page and the legal name for search engines; **and the home page's opening section is tuned for tablets** (bigger two-line headline, shorter hero, card shown on a tablet held sideways); decisions 3 and 18 updated, decision 27 added	13, 15
30 Oct	**The opening section of the home page has no photo any more**: a layered navy background with a faint grain and one soft glow, a two-line headline and the Apply button always on screen; decision 10 (the borrowed photo) is settled	13, 15
30 Oct	**A new headline typeface (Outfit) on the public pages, the sign-in pages, the borrower, HR and finance pages and dialog titles**: headlines, section titles, key figures, small labels and main buttons; free font, 32 KB, no change to layout or loading speed (the admin pages keep the old one)	13
30 Oct	**The loan agreement is editable under Site content, and every acceptance is recorded**: two agreements (Salary Advance, also for HR and finance staff; Personal Loan) with versions and history; each new application stores the exact text accepted, the time, address, device, a random reference and a tamper-evident seal; shown on the loan page and printed in the debt dossier (older applications say "Not recorded" and Personal Loans no longer print the Salary Advance text); a form clears the tick if the text changes while it is open	13.1, 13.4
29 Oct	**Fixed (decision 24): a declined application no longer stops a person applying again.** The "You have unpaid loans" rule ignores declined, rejected and rate-declined applications; all other cases are unchanged, and a part-paid loan still does not block	15 (decision 24)
29 Oct	**Fixed: correcting a paid loan's statement could reopen it with a balance that was not owed.** Lowering interest lines and then the payment on a loan already marked paid (one loan reported on 29 Oct: three interest lines, then the payment, 4,320 in all) made the loan "Partially paid" with a 4,320 balance, while the statement itself added up to zero. The platform now keeps the over-payment in mind while you correct, so the loan stays paid. Only that one loan was affected; its record is put right with two edits to the "Loan paid" line (no new payment, no email to the borrower). Marking such a loan as paid again would have added a false 4,320 payment and emailed the borrower, so please do not use it for this	5.3
29 Oct	**The 15% collection fee is charged when you press Escalate (the demand notice), not on the 8th day**: the daily check keeps the delinquent mark, the notice email and the 10% late-payment charge; Escalate shows the fee first, charges it once and never twice	4
29 Oct	**Paid / Unpaid filter on All Applications**: one Repayment select (All unpaid, Nothing paid yet, Part paid, Late or in default, Paid in full) with counts and the total still owed; only paid-out loans count as unpaid	11
29 Oct	**Opening hours in the top strip** (decision 23): "Mon–Fri 8 am–5 pm" as an editable line under Site content, Contact details; the strip shows the first phone number only, to make room, and the email and address come in on wider screens; on phones the hours are in the menu	13
29 Oct	**A loan the borrower still owes on is flagged for the admin** (part paid, late or in default): a note on the borrower's other applications, red when a loan is late, and an "Owes on a loan" tag in the applications list	11

Date	What changed	Section
29 Oct	**Demo phone numbers fixed**: written without spaces so the demo's borrowers can submit the application form (live demo: at its next reset)	15 (decision 24), 18
29 Oct	**Public numbers settled (decision 1)**: the Salary Advance card says "up to 30% of gross salary" (it said 50% of net salary) and the Personal Loan card ("up to KES 500,000", "1 month tenure") stays as it is. The built-in wording of the Salary Advance card now matches; on a live site the card's text comes from Site content, where you made the edit	15 (decisions 1, 21)
29 Oct	**Applicant pages, second round**: loan-list filters and due labels; a clearer profile (document labels, aligned bars); the loan limit shown on the home card and in both forms; **Apply again**; a borrower's own "How much could I get?" calculator; a fix for a complete profile showing as incomplete; and a new look (the website's navy and red, 12 px labels, larger figures, rounder cards, loading skeletons, count-up numbers, a red marker for the current page).	
28 Oct	**The applicant's pages guide the borrower**: a "next step" card on the home page (finish the profile, review the rate, a payment due or late, approved, in review, ready to apply); a five-step tracker with "what happens next" on each application; the money shown first; the salary advance form on a phone with your details folded, a bar showing what you receive and repay with Submit, a draft kept while the tab is open, and a named message when a profile detail is wrong; the Apply tab explains a refusal before the form. "Outstanding balance" on the home page now matches the loan page after part payments and fees.	
28 Oct	**Applicant pages on phones: eight small fixes** found by measuring them again (an amount running out of its box on small phones, crowded menu labels, a wrong loan name in the list, "Done" breaking in two, an email split mid-word, "Approved 0" for a borrower with four paid-out loans, a negative disbursement before anything was typed, an empty top bar). See Section 14.	
28 Oct	**A slimmer announcement banner**: the message and its link now run on as one sentence instead of the link sitting on a row of its own. On a laptop it is one line, about 30 px tall instead of 44 px; on a phone it is two lines, about 45 px instead of 83 px for the same message. A longer message still takes the lines it needs. Colours, wording and the Site content editor are unchanged.	
28 Oct	**A slim top strip on the home and FAQs pages** (as tall as a one-line announcement banner), shown only while the page is at the very top: tap-to-call numbers, email and address from your contact details (on a phone, a **Documents needed** link instead of the number, because the menu bar already has a call button), and **Track application** (signed out: sign in, then straight to the applications list; signed in: **My applications**). It slides away on the first scroll. No opening hours, rates or licences are claimed on it.	
28 Oct	**Leo, a chat assistant with a lion-cub mascot**, on the public pages and the applicant dashboard: answers common questions from your FAQs, estimates what a loan would pay out using the application form's own formulas, greets signed-in applicants with their profile progress, and is built for phones first. Two decisions added (21, 22).	13.3, 15, 16
27 Oct	**Simpler sign-up and sign-in pages** (one password box on sign-up, each message said once, nothing moving beside the forms, admins reach their sign-in through a small link) a **link to Leocap Consultancy** on the home page, and a fix so links and buttons on the sign-in and sign-up pages work on the first click, the sign-in page opening with your email already filled in right after you sign up, and an honest message on the sign-in pages when the server is busy or down (instead of "Invalid email or password").	14, 15
27 Oct	**Phone review of every screen**: no iPhone zoom on tapping a box, text never under 12 px, larger tap areas for small links and menu rows, menus and pop-ups sized to the visible iPhone screen, the profile banner no longer overlaps.	14, 16
27 Oct	**Dashboard action buttons**: Approve, Reject, Disburse and Mark paid in the Loan pipeline now look and behave like buttons (spinner, no double click, on-screen result instead of a pop-up).	11
27 Oct	**Sortable tables**: All Applications (with a Due column), Manage Applicants, HR and finance applications, the dashboard Loan pipeline, Financial Analysis transactions, audit logs; status sorts by what needs action first (Reports too).	11

Date	What changed	Section
26 Oct	**Account statement PDF no longer shows "nan" instead of dates** (it affected statements that mix lines typed in from your spreadsheet with lines the platform recorded since; two applicants today). Download the statement again. No data was changed.	6
26 Oct	**Privacy Policy contact details corrected**: the Data Controller section showed made-up details (privacy@leocap.com and +254 700 000000). It now shows your real email, phone numbers and address, taken from Site content so it follows any edit there, plus the P.O. Box from your loan agreements. Nothing else in the policy changed.	13.1, 15
26 Oct	**Search engines and speed**: own title, description and link preview for every public page, robots.txt, sitemap, tab icon, one official address, business details for search engines, pages that should not be listed marked; the home page downloads about a quarter of what it did (screens load when opened), the photo, font and logos come from your own site and are smaller; a safety net for tabs left open during an update; security updates to Zod, Vite and about sixty packages. The server rules (www redirect, "do not list" on app., caching, each page's own title) were published after a check on the demo site; live search score 83 to 100.	13.2
25 Oct	**Delete Application fixed**: the button failed for every loan; it now deletes a loan that was never paid out (with its statement lines, keeping a copy in the system log) and explains why a paid-out loan cannot be deleted.	11
25 Oct	**Edit more of the public pages**: Site content now also covers the home page text (opening section with its three numbers, loan product cards with the Most Popular / Coming Soon switches, the three "How it works" steps and the band under them, the Contact and Testimonials headings) and the **Privacy Policy** (sections can be added, removed and reordered). With nothing published the pages are unchanged. Found: the policy's Data Controller section has placeholder contact details (decision 16).	13.1
25 Oct	**Edit the public pages yourself**: a new **Site content** screen in the admin menu for the contact details, an announcement banner, testimonials (only with the client's agreement) and the FAQs, with private drafts, a preview on the real page, publishing, history with restore, and every change in the Audit Trail. Contact details are now kept in one place (the header, footer, home page, sign-in pages and FAQs all follow them). Not in the demo.	13.1
25 Oct	**Approve and reject now follow the same rule as Amend Amount**: nobody decides their own application, and HR and finance never review their own role's loans (admins can still decide anything). The buttons are hidden where they would be refused. HR and finance **rejection reasons** are now saved. Finance's **HR Loans** page opens the full review page.	9
25 Oct	**Demo version for showing to clients**: its own site and made-up data, a role picker, a presenter guide of ten stories, "Run today's job" and a demo inbox, sample AI answers, sample bank details and a SAMPLE mark on its PDFs, a nightly refresh. Your real clients' names no longer appear in it. A borrower's **Next due date** ignores paid loans, and a borrower's loan page no longer calls every company's salary advance "Ideon".	10, 18
25 Oct	Borrower is emailed about a penalty (with an opt-out tick box). **Add Penalty** on the loan page. **Delete a wrong line** from a statement. **Applicant Statement** with filters, totals and a PDF that follows them. **Overdue card** is clickable. Fixed a scrolling fault on the applicant details page. **Edit a statement line** (amount, date, description). Uploaded-document cards fixed. New hover hints everywhere. Disbursement date in the applicant's Loan Applications list, and a form to **enter, correct or remove** it. **10% late-payment charge** added to the daily check, next to the 15% fee (loans applied for from 26 Oct 2026), and the **loan terms updated** to state it. **Demand letter** now shows the real fees and the balance owed. The credit score's reasons now show on the Financial Analysis page.	4, 5, 6, 7, 11, 14, 15
23 Oct	Public website redesign (same wording): menu bar, footer, home page, calmer statistics. New **FAQ** page. Testimonials section built (hidden until real quotes).	13
22 Oct	New sign-in, forgot-password and sign-up pages. Safer delete buttons (the old "Suspend" really suspends). Full audit trail. Every email recorded. Calculators fixed. Month-by-month "Mark Paid" with preview. "Fully repaid" email on every route. Finance and team notices. Admin, HR, finance and applicant portals made consistent and phone-friendly.	4, 7, 10, 11, 12, 14

Date	What changed	Section
21 Oct	"Mark as Paid" fixed. Delinquent loans handled. **Daily reminders switched on.** Forgot password works. HR told of new applications. Server sets the starting interest rate. **Loan limit** added. Pop-up messages work. Security fixes (profile, uploads, cookie, links). HR and finance work for any company. "Amend Amount" built. HR report PDF and Excel fixed.	4, 7, 8, 9, 10
19 Oct	Security round (approving or deleting others' loans, admin accounts, documents, test pages, sign-up role, public company list). Sign-up company field fixed. 9-digit ID numbers accepted.	8, 9, 10
17 Oct	Reports redesigned and fixed (PDF download, filters, overdue figures). Company shown on loans corrected, with a data fix. Expired sign-in handled.	3, 6, 9, 10
15 Oct	Platform put online with automatic publishing. Database upgraded. Interest and balances kept in step. Statements fixed. **Existing records corrected** from your spreadsheet. Phone text, buttons and banner fixed.	1, 2, 3, 14

18. The demo for showing to clients

A separate copy of the platform, filled with made-up people, for presenting to prospective clients. It has its own web address, its own database and its own settings. It cannot reach your live data, and the live platform cannot reach it.

What	Details
Where	**demo.leocapinvest.co.ke** is the site; demo-api.leocapinvest.co.ke is its engine. Search engines are told not to list it.
What is inside	Three made-up employers, 52 made-up people (the lender's staff, each employer's HR and finance staff, and borrowers), about 150 loans over 13 months with their statements, history and audit trail, sample documents and M-Pesa statements. Every email address uses a reserved ".example" ending, so nothing can reach a real person.
Choosing who to be	The page `/demo` lists eight people: two lender admins, three employer HR and finance staff, three borrowers. One click signs in as them and opens their own portal. There is no password to type.
The presenter guide	`/demo/guide` has ten short stories in the order that tends to win a room: the loan book at a glance, approving a loan, paying it out, lending to someone with no payslip, the daily chase for money, collections, employers, finance, what the borrower sees, and reports with the audit trail. Each button signs in as the right person and opens the right page.
The Demo button (bottom left of every page)	**Run today's job** runs the real daily job (reminders and late fees) and shows what it did. **Open inbox** shows the emails the platform would have sent; nothing is delivered. **Presenter guide** opens the stories. **Reset demo data** (admin sign-ins only, once every 3 minutes) puts everything back as it started.
Fresh every day	The data is rebuilt at 3 am each day, so "due in 7 days", "due today" and "8 days late" are always true on the day. The demo is kept awake between 6 am and 9 pm.
Always the latest	Every time a change is published to the platform, the demo is updated too.

What keeps it safe

Risk	What is done
Real data	The demo has its own database. It refuses to start, and the rebuild refuses to run, unless it is switched to demo mode and the database name contains the word "demo". The rebuild also refuses to wipe a database that holds any real email address.
Emails	None is delivered. Each message is only recorded, and shown in the demo inbox.

Risk	What is done
Your bank details	Every PDF and Excel file made in the demo shows made-up bank details, and PDFs carry a faint diagonal **SAMPLE**. The real account numbers are not in the demo. The live platform's files are unchanged (we compared ten of them before and after).
Your clients' names	The platform used to add "Ideon Limited" and "Nakama Tech LTD" to its database every time it started, which would have put them in the demo. That no longer happens in the demo, and a search of the whole demo database finds no real client name.
AI	The demo has no AI key. Its AI summary and chat give clearly labelled **sample** answers worked out from the statement's own numbers, so they always agree with the figures on the page.
The live platform	The demo's tools are not published to the live platform, and the live website does not contain them.

Using it in a meeting

1. Open demo.leocapinvest.co.ke/demo/guide and pick a story, or open `/demo` and choose a person.
2. To switch person, use **Demo** then **Switch role**.
3. After a session, press **Reset demo data** (as an admin), or leave it: it refreshes itself at 3 am.

About this document

This file is kept up to date as the platform changes. Whenever something is changed, the matching table gets a new row, the change log (Section 17) gets a new line at the top, and the "Last updated" date above is changed. A PDF copy (`PLATFORM_IMPROVEMENTS.pdf`) is made again from it each time. If anything here does not match what you see on the platform, please say so and it will be corrected.
